You Could Program in Java...

Stand out. Get results. Simplify your HTML code. Enhance your Web site quickly and efficiently — plug in an extensive suite of off-the-shelf applications. Catalog shopping. Classified ads. Video teleconferencing. Sophisticated surveys. Secure group discussion areas. Massive file libraries. Real-time chat. Fax databases. And more.

Create a really **cool Web site** with Worldgroup^{$^{\text{M}}$} — in the time it takes you to make a cup of coffee.

With the Worldgroup Plug-in for Netscape, launch client/server applications directly from your Web site.

With a few simple EMBED commands in your HTML files, your site delivers the supercharged, interactive presence your company deserves.

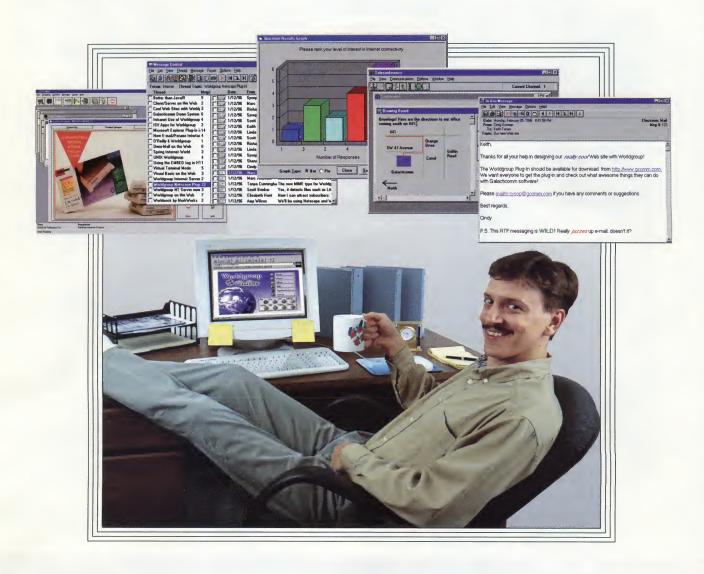

Once your users have the Worldgroup Plug-in software on their PCs, they will establish a persistent connection to your

server — ensuring greater realtime interactivity between your users and spontaneous delivery of data from the server.

When launched, the Worldgroup client apps are fully multithreaded and run directly from the browser. Any updates to your apps will be transferred automatically to your users in the background.

And, users can **continue to surf** the Web, while simultaneously maintaining their client/server sessions.

or Install Plug-in Web Apps

Keep track of user activity and statistics with an audit trail and comprehensive accounting reports. Define security access for each user, or create classes of users. Set time limits, billing options and more for easy system management.

Use your favorite Web server to launch your Worldgroup applications (or use the Web server built into Worldgroup).

You can also choose from a wealth of existing third-party apps,

or create your own using Visual Basic and other enterprise tools.

Of course, you can include any Java applets, VRML worlds or any other HTML files you've already created — Worldgroup fully embraces the **open standards** of the Web.

The Worldgroup client software also can be run independently of a Web browser. Authorized users can connect to your server via dialup modems, ISDN terminal

adapters, X.25 or Novell IPX/SPX network connections.

This stuff is steaming hot. See for yourself. Download the Worldgroup plug-in today from our Web site:

http://www.gcomm.com

(outside the U.S./Canada, 954-583-5990)

From the makers of

Paper beats rock. Rock beats scissors. Scissors beats paper. 32-bit beats 16-bit.

You demand performance!
You just bought a Pentium, a
28.8 modem, and upgraded to
Windows® 95 to take full
advantage of your computer's
32-bit architecture. So why are
you still settling for old, 16-bit
communication software that
chokes the performance of
Windows 95? Give your
computer the 32-bit POWER
in QmodemPro for
Windows 95.

QmodemPro for Windows 95 is the first communication software that delivers all the features and performance you'll need to get the most from the new 32-bit Windows platform. And since you want dynamic features and ease of use, you'll love the fact that QmodemPro's communication and Internet capabilities go way beyond the standard terminal software included

software included with Windows 95.

QmodemPro Crushes Procomm.

The Premier Communications Solution for Windows® 95

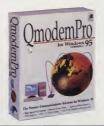

Whether you're connecting to the office, company mainframe or BBS for file and data transfer, get the 32-bit power in QmodemPro to satisfy your "need for speed."

Connecting The World™

Available at Software Etc., Babbages, Computer City, CompUSA, Electronics Boutique, Egghead, Best Buy, Fry's, Staples and other software outlets for \$129 or less.

Registered Qmodem/QmodemPro customers call for upgrade pricing.

Readmestxt Winners

Without contests we'd all be losers.

I don't recall who first spun this glass-half-empty bon mot, but the bright side does imply the contrary that with a contest or two, maybe some of us could call ourselves winners.

We've actually got 20 of them this month — winners, that is. And if I wore a hat, I'd tip it to them all.

But first I'd tip it to the over 400 "winners" (the complete bunch of BBSs taking part in the first ever Top 20 BBSs on the Net contest) whose callers and subscribers took time to vote and comment on their favorite Internet-accessible BBS.

Connecting a BBS to the Internet can be a difficult task (how's that for an "understatement of the year" contender). The fact that so many have actually pulled it off is testament to a lot of things — the resilience of this industry, the ingenuity of its developers, the perseverance of its players and the unending demands of its users.

Bottom line: it works.

Callers say they want it, sysops get it. Many times this push-pull process comes at a significant price to the system operators — those who must invest today on the hope of a return tomorrow, however small.

That's one reason why we're giving callers (well, Netters) the opportunity to publicly thank their sysops for the work they've done, and to show off some of the cooler things their favorite boards have to offer. Sharing this sentiment I'm sure is Richard Mark, keeper/editor of

the SBI List (http://dkeep.com/sbi.htm), which served as the basis for the contest. He put in a lot of his own time just making sure the whole thing launched and landed without incident. Our thanks to him.

Since we're on the subject of Internet and BBSs, let me enter a curve into the lineup. You might not know it but for over 12 years an entire country has been able to securely access every-

thing from movie tickets to history lessons over a desk-

top electronic device.
There's no "computer"
involved and they don't
use the Internet — yet.
Stumped? Jacqui Kramer
(Future Tense) investigates
and has the fascinating
details on why we might not

even need the Net.

Also revisiting our pages this month is Delilah, that "middle-aged maven of online advice" who recently published her own book (Ask Delilah...About Cyberlove). We've asked her to give us an original sampling of some of the

questions our readers and others have sought answers to. As usual she has obliged us with stimulating queries and informative responses.

And as always we've got our experts discussing the latest regarding the Web, Mac BBSing, shareware, Internet tips and a few rants and raves. Further, don't miss the most important pages: those with BBS access numbers and Telnet addresses.

Be sure to call them, and while you're there, thank the sysops for us.

Keep Reading, We'll Do the Feeding

Just thought that I would send you a little note to say how much I enjoy your magazine. You see I was browsing through the plethora of computer magazines the other day and I stumbled across BBS.

I must say, I'm usually not that drawn to computer mags, I mean they seem to be all the same, but something about BBS caught my attention and kept it, which is not that easy to do. Needless to say I practically read the entire February issue... I mean finally a magazine that I can understand. I don't know much about Java, or HTML, but I would like to, any suggestions on how I can expand my mind about all of this?

I am somewhat computer literate, but I want to feed my brain more, any suggestion please let me know!

JaeCrash@aol.com

Technical Sup-what?

Enjoyed your piece on "The Internet Grab" (March '96), but it should be pointed out that though the telcos may be getting into providership, they will still need significant staffs to maintain users. Are they going to want to pay for this? I think not. Instead, look for them to seek out current local providers to handle such things. Just my two cents.

E. Schaffer

It's in the Works

I like your magazine and used to read it a lot for the stories on other (BBS) users. As a BBSer I'd like to hear more about what they're doing online...Can you bring that section back or start a new one?

VAIIS

Pile It On

The goal is simple: Get every available shareware, freeware and public domain file in existence and make them available at the click of the mouse.

The ambitious program is what makes up the World File Project from Milwaukee-based Exec-PC, long regarded as the largest BBS in the world.

The File Project on the Web makes available all files from the BBS (500,000 of them; through a high-speed link) and includes a conglomerate of substantial FTP and archive sites, as well as "hundreds of CDROM-based file collections."

And users can rapidly scan the whole database using the Hyperscan feature.

"Of course, with the constant proliferation of files and pro-

grams, this is one project that will never end," said Robert Mahoney, Project founder. It "will continue to grow with every passing day."

Already the collection ranges from Windows 95 applications to nature clip art. Surfers can access the files at www.filepile.com where a \$15 gets them three months of access and \$50 buys a year. Signup is via the page or voice -414.789.4200.

Voice E-Mail: It's Hear to Play

It's not integrated into a BBS (yet), but one new tool from **BONZI Software has** the potential for making your virtual messaging quite a bit less virtual, and more like life.

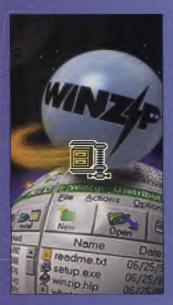

Hear your email.

Instead of sending email the "old" way by typing out your thoughts, Voice Email lets you record a message and send it along with your photo as an email message. The recipient launches the free Voice E-Mail player and up comes the pic, out bellows the message.

An add-in for Netscape, Eudora, Prodigy, AOL, WinCIM, and Microsoft Mail, Voice E-mail integrates itself into the mailreader and launches with a mouse click. Currently the software's available only on the Windows side, but plans are being laid for other platforms.

What makes Voice E-Mail practical is its use of lossless compression (as opposed to the more common "lossy"), which enables the program to drop the size of an audio file significantly while retaining the same quality in which the sound was recorded. Separate compression technology is used for squeezing the images.

WinZip is back with version 6.1, and this time it's touting an optional "Wizard" interface that automates some of the more common tasks associated with handling Zip files — those files with the extension ".ZIP" that are made up of compressed programs, images, files...whatever.

The Wizard interface is targeted at novices and can take one through each step up unzipping or installing software from Zip files. Once you're up to speed on how things work, you can click out of the Wizard and take control of WinZip yourself.

For Windows 3.1 and 95, the software goes for \$29. Previous registered users can download the upgrade at www.winzip.com or email support@winzip.com for more information.

For instance, roughly 45 seconds of speech and one nice quality image compresses to about 285K — not much in download time.

The decompression takes place automatically upon launching the Voice Email file.

We tested Voice E-Mail in the Eudora mail reader. When launched with the Voice E-Mail for Eudora icon, Eudora's toolbar adds an option for listening to voice messages and recording them. The recorder gives users the ability to toy with sound, too, creating reverbs, echoes, etc.

Voice E-Mail goes for \$29.95 and includes the player and recording program — you supply the sound card and microphone. The free Voice E-Mail Player (which can only retrieve messages) can be downloaded from CompuServe and BONZI's Web site at **www.bonzi.com**. Fax them at 805.238.5798.

Chasing the ISDN Modem

"ISDN is coming." Seems we've been hearing that for years. Truth is it's already here (in some respects) and its promise of swift access to the Net will

NetCHASER ISDN modem

likely continue propelling it into even the smallest markets — given the cost for setup continues to slip.

Getting ISDN requires

several things, not the least of which is an ISDN modem (or terminal adapter to be specific). The latest of these is NetCHASER from Chase Research, and at \$425 each the company is aiming for the home and remote office user.

Through data compression and channel bonding Chase says
NetCHASER can connect at 128 Kbps and achieve interface speeds of up to 460.8 Kbps.

A nice feature of NetCHASER is its inclusion of two analog ports, which allows you to plug in regular modems, fax machines and telephones for the old fashioned connections — each can have a different number, too.

The product also has a built-in NT1 which lets you plug it into ISDN wall outlets; it is compatible with ISDN services from all the RBOCs.

Along with the modem comes trial Net access software and a voucher for the Chase IOXTRA 166550 add-in I/O board, which equips your PC for high-speed ISDN. NetCHASER is compatible with Apple, DOS and Windows (and Win95) operating systems.

For more information contact Chase at 800.242.7387/615.872.0770, or check the Web at **www.chaser.com**.

Nulo/MurkWorks Launch 'Net BBS

The latest stride in BBSing via the Internet was made in March by a joint venture between NuIQ Software and

Dubbed 'Net BBS, the \$395 package includes MurkWorks' BBSNet for Netware software and NuIQ's Powerboard BBS four-line software.

The integration of the two products, says NuIQ, eliminates complex setups usually required in marrying a BBS to the Internet.

Once the setup is complete, Web/Internet browsers can type "telnet://" instead of "http://" to access the BBS.

'Net BBS offers email, Usenet access, FTP, Gopher and, of course, Telnet.

For the uninitiated, this model will allow sysops to offer dial-up access as well as Telnet and give callers real-time chat, messaging and file exchanges.

Powerboard utilizes RIP graphics and supports the Windows Interface Protocol (WIP) for those slick graphics.

For more information, contact NuIQ at 800.844.6526. Or check the Web at **www.nuiq.com**.

TEAMate Update —— Multi-Protocol Access

In case you missed the announcement earlier this year, MMB Development Corporation released a significant

upgrade in version 4.05 of its TEAMate server software that effectively turns an online site into a multi-protocol service.

Translation: TEAMate's information base can be accessed with all standard protocols — Web browser, a Windows, Mac or OS/2 GUI client, Gopher clients, character terminals (VT100) and Query-by-Mail.

Features include:

- Uploading directly to the server database with a standard Web browser
 — no more FTP — and uploads can be encrypted with PGP.
- The TEAMate Web server autogenerates HTML controls and content, striking the need for users to code custom HTML. Users can change the look and feel of the interface based on the kind of data being presented. Previously supported only in the GUI client, this use of multiple screen sets is now effectively employed on the Web.
- The GUI client supports Netscape for viewing HTML inside or outside the TEAMate server. And no TCP/IP connection is required if used with the client and regular dial-up.
- Webmasters can use TEAMate to control outgoing access to the Web, including the control of sites available to end-users.
- A new table data format has been added to the client software for more flexibility, and icons can be used inside the tables.

The server software for setting up an online service is available for Unix servers from SUN, IBM, DEC, HP and Intel.

The system, along with one week of training and a year of support and

CONTINUES...

upgrades, goes for \$4,100. Other pricing options are available. For more information call 310.318.1322. Better yet, try it out at http://mmb.com.

Thinking Cable, Acting Local

Offline

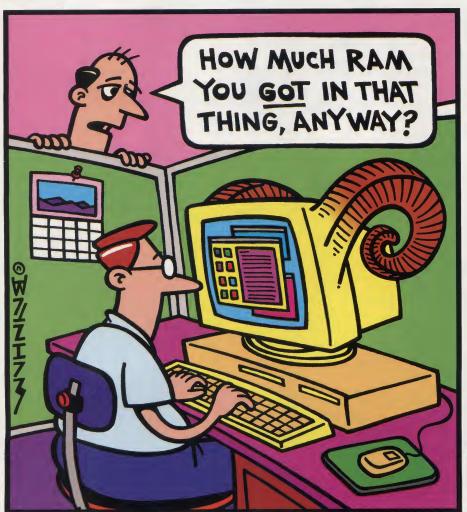

It's called LineRunner and it may be coming to a neighborhood near you.

LineRunner, a broadband cable online service produced by The Excalibur Group (a joint venture of Time Inc. and Time-Warner Cable), is planned to deliver data to computers via fiber optic cable and cable modems in the home, at speeds in the megabitper-second range.

"Because cable systems are defined by communities, LineRunner is community-based," said an early factoid from Time-Warner Cable, "carrying thousands of screens of content relating to local news, government, civic organizations, and businesses in each locality it serves." It also carries considerable content from Pathfinder (www.pathfinder.com). As well, it provides a high-speed connection to the Internet and to conventional online services such as America Online.

The first LineRunner installation was a 500-subscriber market test in Elmira, New York, which began in July of last year. Based on the success of that test, Excalibur plans to roll LineRunner

by John Baynham

out to about five medium-sized cities this year — the Akron/Canton, Ohio area being the first.

For more information check Pathfinder.

Online Shopping Mall Checks Out of Beta

Galacticomm's Omni-Mall shopping system — the client/server application for its Worldgroup online software has officially emerged from beta.

Omni-Mall joins other Worldgroup applications users can launch directly from a Web site using Netscape Navigator 2.0. Omni-Mall allows an organization to sell its own products online as well as offer retail space to other merchants.

"What Worlds Chat did for talking on the Web, Omni-Mall does for open market commerce," said Galacticomm President and CEO Scott Brinker, during beta testing. "Best of all, anyone can install Omni-Mall, import their products and be up and running on the Web with a few simple EMBED commands in their HTML files. The Worldgroup Plug-in takes care of all the user interface for you."

Omni-Mall maintains a database of stores, their departments and products; stores are created by the sysop, whereas departments and products can be created or added by either the store manager or the sysop. Image files (JPG, BMP, TIFF, PCX), sound (WAV) and unlimited-length text files can be associated with each product. These can be viewed online or downloaded for later use, which is ideal for companies selling information, graphics or software. Customers can browse the stores from their PCs, select products and then pay using a variety of payment options including American Express, Discover, MasterCard, Visa, COD, purchase order, and online credits. Payments are encrypted for added security. Omni-Mall can also fax orders and invoices from each store to a specified fax number when used in conjunction with

AT&T — The Net Deal

Amid rumblings from Internet service providers, AT&T has begun rolling out its Internet access program called AT&T WorldNet, including five free hours of access for one year and a specially branded Netscape Navigator.

The program also offers AT&T customers \$19.95/month unlimited access — \$4.95/month for three hours and \$24.95/unlimited for non-AT&T customers.

AT&T said it is marketing the service to its 80 million residential customers and 10 million business users.

"Now every one of our consumer and business long-distance customers has an easy way to try the Internet," said Tom Evslin, vice president of AT&T WorldNet service.

At presstime the company was unable to provide BBS Magazine with a complete list of

access numbers, though they say all are 28.8K.

AT&T can offer such a program, according to a New York Times report, because regional Bell companies must provide the free connections as a result of a 1983 FCC ruling exempting computer connections (AT&T pays the RBOCs big bucks in for local customers' voice calls)

Some have called AT&T's move a major blow to existing Internet providers. Others argue the real money in is in dedicated lines and the development of Web sites, not just in offering access.

These providers would also argue that the key to keeping customers is, of course, good service. Customers who are treated well on a personal basis will likely stay put rather than flee. For its part, AT&T says it has in place a 24-hour toll-free hot line "staffed by experts" to answer users' questions.

For more information call 800-WorldNet.

Galacticomm's optional Fax/Online add-on module.

Omni-Mall goes for \$995 (including a Point of Sale dial module for real-time credit card processing). Those currently using the terminal mode version of Omni-Mall or Galacticomm's Shopping Mall can upgrade to the client/server version for \$249 direct from Galacticomm. Omni-Mall is made available through an OEM agreement with DataSafe Publications, Inc. of Albuquerque, NM.

For more information, call 800.328.1128 (or 954-583-5990 outside the U.S. and Canada). Check the Web at **www.gcomm.com**. Demo BBS: 954.583.7808.

server. MindWire NT also offers tools to create and host an online information system including a built-in Web server. Sysops and businesses can customize their entire online service to fit their individual style/ theme with images, sound, text and Windows icons.

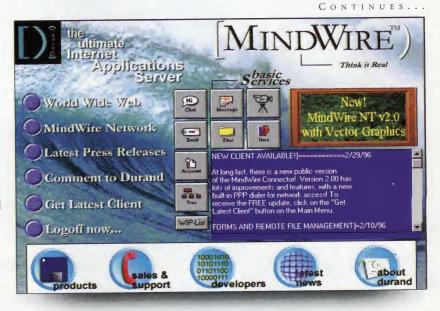

Download the client from Durand's Web site at www.durand.com. The software runs on Windows 3.1, 3.11, 95 and NT. For more information call Durand at 805.961.8700. For international sales and distribution inquiries email bill@finelineintl.com.

Durand Releases New MindWire Client

Durand Communications released in March the second version of its MindWire client software which integrates a built-in PPP/Internet dialer and automatic mail forwarding to a specified Internet email account.

The free client lets Net surfers connect to all public access MindWire NT systems, currently including online communities, gaming systems, real estate and others. Access is via Internet, LAN or direct modem dial-up; once connected callers can send email, chat with other users online (with popup images), search for information and download files in a graphical environment.

MindWire NT is a true 32-bit multithreaded Internet server intended to run on a Windows NT

Wildcat! 5 Web Server/Interactive BBS

Mustang Software began taking orders in March for its new Wildcat! 5 system, with plans to release the "versatile interactive solution" for corporate intranetters and Internetbased online communities by press time in April.

Mustang (Nasdaq: MSTG) said the interactive, multimedia 32-bit

platform has been designed from the ground up to run under Windows NT/Windows 95, boasting email, public and private conferencing, threaded messaging, individual and group chat, file library access and the ability to travel out to Internet locations using the browser built into the Wildcat! Navigator frontend (in conjunction with the optional Internet Connectivity Package — ICP— which also allows Wildcat! 5 to function as a Web server).

Wildcat! 5, which has been test-run on over 1,000 gamma sites, offers connection through a LAN/WAN, by direct dial and Telnet with communication programs and terminal emulators, or through the free Wildcat! Navigator — a graphical Windows front-end that gives users the navigational ease of the popular Web browsers from Netscape, NetManage and Microsoft.

In addition to the browser, the Wildcat! Navigator also offers a suite of clients giving "point and click" access to the email and threaded messaging areas, public and private chat conference areas, file libraries and instant paging.

Mustang says security levels allow system managers and sysops to define exactly which files, messages and menu options to make accessible to each user. Standardizing page and menu setup with HTML (Hyper Text Markup Language) gives users the ability to publish information once — on the Internet and intranet — without the need for time-consuming reformatting. And the optional wcExchange client allows users to receive email and message conferences (including Usenet with optional ICP) via the Microsoft Exchange in-box for email access directly from the desktop.

Options for Wildcat! 5 include the mentioned ICP, which supports inbound and outbound Telnet, FTP, and UUCP, as well as a Web server.

Also available will be 8- and 32-line upgrade packs, the wcExchange client, wcCODE Custom Online Development Engine for application development, wcReports for exporting data and usage statistics, and the Wildcat! Custom Connector, allowing Navigator customization with logo and graphics.

Prices begin at \$149 for a two-line version; 16- and 32-line systems go for \$349 and \$699 respectively. The optional Internet Connectivity Package will be priced at \$249.

To check it out, d-load the Wildcat! Navigator from www.mustang.com; Telnet to bbs.mustang.com; or, dial in to 805.873.2400.

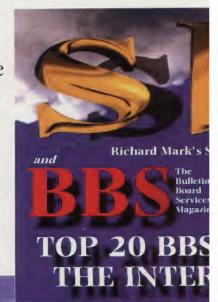

For more info, call Mustang at 805.873.2500 or 800.999-9619.

How to find one online Next Month in BBS Magazine

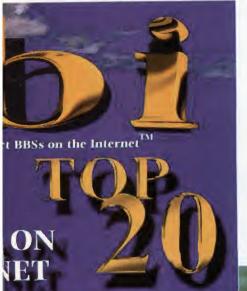

t started as a notion, grew into a possibility, and finally became a reality. The world's very first and only Internet BBS Contest commenced on Nov. 1, 1995, and concluded on Feb. 15. Over 400 Internet-accessible

BBSs competed on the Web to see who could gather the most votes by BBS users worldwide. Utilizing the "Guide to Select BBSs on the Internet" (also know as the "SBI List" at http://dkeep.com/sbi.htm) as the source for our contestants, 20 BBSs were ultimately selected as the most popular for 1996.

The contest itself received about 10 votes a day — not bad for a first stab at this — and we'd like to see several times that rate for the 1997 contest, which will run continuously throughout the remainder of this year.

This first Internet BBS contest would not have been successful or possible without a little help from our friends. To start, I have to thank my partner, Dragon, and my "home" BBS, Dragon Keep (dkeep.comand http://www.dkeep.com), for hosting the SBI Web site (http://dkeep.com/sbi.htm), and for contending with users and sysops from around the world just dropping by day and night to pick up the most recent SBI listing.

Concentric Research (cris.com and http://www.cris.com), which has already done much to make the SBI list work on the WEB, once again contributed their CGI-scripting wizardry to make a Web-based voting booth. Many of the verification problems, such as duplicate voters, mass voting, and other "overzealous" voting strategies were skillfully avoided by a range of clever Concentric reporting techniques (shhhh...they're a secret).

I'd also like to add a special thanks to the users of Dragon Keep and Concentric Research for accepting our decision to disqualify both systems from the contest itself.

Of course the contest would not have happened at all without the constant encouragement of *BBS Magazine*, our inspiring contest co-sponsors.

My final thanks goes to the sysops of the over 400 BBSs hooked to the Internet. It's these hard-working individuals who have created the Internet's virtual communities: the villages, towns, and small cities, complete with rest stops, nightclubs, arcades, shopping malls, and libraries. It is the BBS sysop, often the lone hobbyist or entrepreneur, who realizes the Internet is just a highway, but a BBS is a destination.

The winners of this year's contest covered a surprising range of BBSs. From huge mega-chat MajorBBS systems like the 180-node Point Blank BBS (#1) in New York, to a small six-node Arizona Renegade BBS dedicated to the creative arts called Blastertronics (#16). The Top 20 even included the largest file warehouse on the Internet, Exec-PC (#11), who also has the distinction of being the largest BBS in the world, on or off the Internet.

The Top three winners — Point Blank, Nucleus Information Systems, and Anarchy-X — all share several characteristics in common. All three are MajorBBS or Worldgroup systems, all three are extremely interactive cybercommunities, and each has sysops the users can't seem to stop bragging about. In fact, if there is a lesson to be learned from these very successful BBSs, it may be this: A great BBS is more than the sum of its file areas, chat rooms, message bases, and online games; every "good" BBS has these in quantity. A truly "great" BBS instills a sense of place and belonging to its users, guided by a friendly, helpful, creative, and patient sysop. As the users of these Top 20 BBSs will attest, a great BBS isn't just a place you visit, it's where you live in cyberspace. It's home.

— Richard S. Mark

Point Blank BBS, Ltd.

Sysops: Joe Hureau (Snowdog), John Romano (zmmy),

and Kathi Livornese (Pae).

Point Blank's Joe Romano (left), John Hureau and Kathi Livornese on the moon.

Point Blank BBS, Ltd. is a multifaceted communications provider whose owners claim over 15 years of experience servicing and providing data solutions to the online communitv. Point Blank is Long Island's leading online entertainment center, offering callers over six gigabytes containing thousands of popular shareware titles. multi-user interac-

tive games, a live teleconference chat system with full action commands, user meets, and weekly trivia with prizes.

Point Blank began its BBS days in 1992 as an eight-line basement hobby board. It has grown into a tremendous online entertainment and business system with over 150 phone lines run on Galacticomm's The MajorBBS/Worldgroup.

PB also supplies corporations with simple online solutions through the BBS and through its sister ISP, LI Internet Headquarters (LIHQ). LIHQ provides full Internet services including World-Wide Web advertising.

Point Blank's Internet interface offers simple menued access to the most popular Telnet, FTP and MUD sites, which makes "getting on to the information superhighway as simple as pressing a few keys," say the sysops. "Internet power users will appreciate having the ability to use Point Blank's PPP server to surf the Net."

Point Blank/LIHQ has one of the fastest connections to the Net, the sysops say, meaning FTP transfer will not be slowed down due to heavy local usage, nor will MUDing.

Point Blank, rated number 48 on Boardwatch magazine's Top 100 BBS contest, offers a free trial access for seven days.

Voter Comments:

Voter: micro@li.net

Great owners, good system, good users.

Voter: ajulius@aurora.liunet.edu

It offers an extremely friendly atmosphere, and is an excellent place to chat, make friends, and to meet people.

Voter: cygnus@pointblank.com

They have great chat forums, keep up on shareware, and are hardly ever down. They're what an Internet BBS should be.

Voter: jaguar@expressways.com

It has everything I ever wanted a BBS to have.

Voter: ack4@acpub.duke.edu

I've been with them for years, since they were a eight-line local BBS, and I've found that the people on the system are fun, and the sysops are constantly working to improve the system.

Voter: st942225@pip.cc.brandeis.edu

The chat is incredible, the games are awesome, the Internet is cheap, the sysops are friendly (as is the staff). Nice selection of forums, an all around good time!

Voter: celso13@futures.wharton.upenn.edu

Point Blank is a great place to log on, chat, and relax. The users and staff are friendly and fun to talk to.

Voter: sputnik@pb.net

There's always someone there...familiar names and faces abound. It's a warm atmosphere.

Voter: dstemnock@pb.net

I am a new user of Internet...They don't make me feel silly for asking questions that would seem foolish to experienced Internet users.

Voter: uasv12b@prodigy.com

Has lots of open lines, great chat facilities good files etc.

Voter: hughesj@is.nyu.edu

Pointblank is my favorite BBS because it has email chat rooms and cool games. The sysops are the greatest and really nice.

Voter: jaefron@vassar.edu

I've been a user on Point Blank for over two years.. it's always been a second home to me.

Voter: bd80606@binghamton.edu

It's never busy because there are so many lines, there are always people I know. The Sysops are beyond friendly. It's a great place to get away from things.

Voter: MichaelT77@aol.com

The people are great, the mix is fantastic!

Nucleus Information Service

1835B 10 Avenue S.W. Calgary, Alberta, Canada T3C 0K2

Voice: 403.541.9470 Fax: 403.541.9474 BBS: 403.541.9400

Web: www.nucleus.com

Software: MBBS, Total Nodes: 100, Pay?: YES, Login: NE Sysops: Dave Berzins, President, Jim Hribnak, Manager

Communication Services, Mark McDonald, Technical Support Manager, Cheryl McDonald, Business Development Manager.

Nucleus opened its doors in mid-1990 with just one line and a good idea. Dave Berzins and Jim Hribnak, Nucleus Inc. founders, made it their goal to make Nucleus one of the biggest and best BBSs in western Canada. "After a few years of

(From left) Mark, Cheryl, Dave and Jim.

growing, it was evident that we could no longer keep the BBS a hobby," said Berzins, "and had to get serious about running it as a business."

Hribnak quit his job, took a pay cut, and

became the first-full time employee of Nucleus. With a great attitude and a bunch of great users, the sysops say, Nucleus began to flourish beyond anything they could have imagined. Dial-in lines were soon increased to eight, then to 15.

"As time passed, users started to flock to Nucleus in droves, and the dial-in lines steadily increased from 25 to 50, 65, 80, then eventually to the 100 lines the system carries today.

With Nucleus on the rise in the Calgary area, and with the Internet coming of age, it became clear they had to be a part of it. Thus, in 1993 Nucleus became the first Internet Service Provider in the Calgary area.

"Adding Internet services at that time was a chore," said Berzins, "but the end result was a system that could be reached by millions of people over the Internet, and a complete Internet package for our dial in users."

After getting Internet service up and running, business skyrocketed for Nucleus with features like 24 CDROMs online. But so did the workload, so Cheryl and Mark McDonald — users of Nucleus at the time — became partners, bringing a wealth end-user knowledge and experience in technical and hardware support. The Nucleus of today, say the sysops, only resembles the Nucleus of old in two ways: "Great users and great times."

Voter Comments:

Voter: spyce@nucleus.com

The sysops are more than helpful getting started is a breeze.

Voter: allison@nucleus.com

It offers all forms of Internet, 100 dial in lines, conferences, online games... almost anything you could ask for. I've been on this board for nearly 3 years, and no (desire) in the future to leave.

Voter: vboao0f2@huey.csun.edu

Ease of features is very much appreciated. The online menus are easy to use and the features it presents are presented in a manner that can be easily understood, even by the novice user.

Voter: cherylm@nucleus.com

I have tried many BBS systems but none can compare to Nucleus. I have made a lot of great friends through this service!

Voter: Dani@nucleus.com

I am fairly new to the Internet and have found nucleus' BBS and Web page very useful in getting me started. They have links to great sites and the staff is really into providing an excellent service

Voter: fitz@nucleus.com

Good CDs online and very helpful people who are willing to answer questions and problems anytime. Lots of games and friendly meets where I get to know lots of users.

Voter: derekh@nucleus.com

The "Nuke," as it is affectionately referred to, provides a very broad and friendly range of services. It has a strong and loyal gaming crowd and is relatively stable (in BBS terms).

Voter: courtney@nucleus.com

Nice people. Excellent service at odd hours. Friendly. Very helpful. Cares about their customers.

CONTINUES...

Nucleus Login screen.

Voter: johansen@nucleus.com Great customer service for any problems. I have seen people take their computers in to them and have them set up their Internet connections.

Voter: steckley@nucleus.com Very inexpensive and professionally operated system, full featured BBS and Internet provider.

Voter: LPhillips@CYBERStream.net Internet access, chat forums, online games, Telnet access, Worldgroup manager access via Internet, etc.

Voter: Cooley@Nucleus.com I think Nucleus is the best because it has full Inet access while still having conferences, online games, gamecon and access to Realms of Despair.

Voter: areiss@nucleus.com I love Nucleus because the atmosphere is friendly and relaxed, yet the service offers a wide variety of services. I also love it because it's where I met my boyfriend rofl!

Voter: pmckenna@nucleus.com Very good customer service, openness to new ideas, responsible community perspective and, at the same time, equal access and no censorship in appropriate channels.

Voter: rico@nucleus.com I can't believe how helpful the staff @ nucleus are!! I've had to call for help several times, and have never waited more than five minutes for a reply.

Voter: srooke@freenet.calgary.ab.ca Nucleus Information Service BBS has a friendly support staff ready to handle even the slightest problem with ease. The user environment is friendly, and everyone tries their hardest to include new users in BBS goings-on.

Voter: rmonreua@direct.ca It has everything I need...from games, to chat, to files for downloading. The users as well as the sysops are friendly.

Voter: tbrigley@agt.net TradeWars, friendly people, excellent sysops, new files. Everything a user needs.

Anarchy-X BBS

San Diego, CA

619.264.5588 619.264.8685

Telnet: bbs.ax.com (199.184.188.10)

www.ax.com

Software: The MajorBBS, Total Nodes: 28, Pay?: YES,

Login: NEW.

Mark Weidinger, Brian Vogelsang, Josh Mercer,

Paul Ferraro

"We started Anarchy-X as a hobby in October of 1991 out of frustration with the way other local BBSs were run," says sysop Brian Vogelsang. "We wanted to make AX a largely social system with meets, parties, activities, etc." They succeeded and today are a largely social system as well as recently becoming a full scale ISP. But what about that name? Vogelsang said Anarchy-X was taken from the album "Operation:Mindcrime" by the band Queensryche.

Anarchy-X BBS has since grown to be the largest BBS in San Diego County. AX went "live" on the Internet in January of 1995, expanding its Internet bandwidth to a T1.

"We offer PPP access, Unix shell accounts on SPARCservers, user and business Web pages," said Vogelsang, as well as "a full Usenet feed, anonymous and dropbox FTP, and even our own local MUD."

The board also carries multi-user TW2002, Doors, chat, Game Connection, Matchmaker, teleconference games and no ratios.

Voter Comments:

Voter: amoffitt@mindcrime.ax.com

Friendly owners, good Internet services, decent users, and it's inexpensive.

Voter: brian@qualcomm.com

Anarchy-X is an extremely social BBS. Meets, parties, events all make it one of the best places around to meet new people.

(Back row) Mark Weidinger, Brian Vogelsang, Josh Mercer and (front) Paul Ferraro.

Anarchy-X Internet connection.

Voter: trishm@bbs.ax.com

They have the best customer support out of any board that I have ever called. They have by far the best chat room that I have ever seen.

Voter: batman@bbs.ax.com

I like the prices. I like the sysops. I love the people!

Voter: g_chu@qualcomm.com

Reliable service and reasonable connection costs.

Voter: Canard@bbs.ax.com

Anarchy-X has one of the most friendly and supportive atmospheres I've ever encountered in the online community. AX also offers an incredible amount of services for a very reasonable price. What more could a BBSer want?

Voter: ccraig@ax.com

I get all my access through Anarchy X, which makes it both my provider and my local BBS. I have SLIP access to the Net, Web space on a SparcStation, local chat and multi-user games with 30 or more local folks at a time.

Voter: don.braunagel@sdcs.org

It's local and wide-ranging at the same time.

Voter: freak@adnc.com

They offer all the advantages of a local BBS and ISP. For the cost of membership, there's no better deal.

Voter: jhough@qualcomm.com

Anarchy-X BBS is definitely the coolest online hang out I've ever logged into.

Voter: Jlassen@mindcrime.ax.com

Great Internet service at an affordable price, and a great sense of community. 100-200 people show up for weekly meets and they support a "literary magazine" made up of poetry and prose. Also, I met my fiancee on AX.

Main menu.

Voter: t_miekom@qualcomm.com

It is an easy to use BBS that offers all the services I could ever want at a really good price. It has friendly users, great sysops, a real friendly, almost family type atmosphere.

Voter: pferraro@ax.com

I love it for the social aspect.. The user meets are super and the owners are the best!

Voter: phynex@connectnet.com

Many types of files, multi-chat. Throughput is better than most.

Voter: bryant@mindcrime.ax.com
It has the coolest group of users

Voter: tyw@mindcrime.ax.com

Simply put, this is my absolute favorite BBS because it has everything that I could want in an online system, from the variety of access levels that I can choose from, to the sense of family that I have with the other users online.

Voter: nnguyen@qualcomm.com

Great Internet service for a low cost. Friendly members. Social atmosphere and well maintained hardware and software.

Liquid Sky BBS is the 303 area code's largest entertainment oriented MBBS system. LS has multi-player Doom, Doom II, and Heretic. Callers also get multi-line chat, Worldlink (links 200 BBSs nightly), Interlink (links select BBSs 24 hours per day), CD-ROMs, outbound FTP, Telnet and Rlogin, trivia, TeleArena, and Mutants. The sysop says the board is known for it's very friendly atmosphere and friendly users.

10 Urbanite BBS

Location: Los Altos, CA USA

BBS: 415.528.6602 / 415.965.3956
Telnet: urbanite.com (204.71.182.2)
Web: www.urbanite.com/bbs.html

Software: Worldgroup, Total Nodes: 2, Pay?: Optional

Login: NEW

The Urbanite BBS is a high-energy, metropolitan BBS offering four-gigs of downloadable shareware; full Internet access; Game Connection for Doom, Heretic, and Descent; Interlink; and local chat areas. The Door games LORD, BRE and Planets are also online. Free access to Telnet-only callers by emailing the sysop upon arrival.

11 Exec-PC

Location: New Berlin, WI USA

BBS: 414.789.4210

Telnet: bbs.execpc.com (169.207.2.3)
Web: www.execpc.com

Software: Custom, Total Nodes: 300, Pay?: YES

Login: Real name

"The largest PC-Based BBS in the World." Huge file collections for numerous computer platforms and hundreds of local and relayed message areas. Online games and databases. Full Internet access free with subscription. PPP/SLIP accounts also available.

12 Multicom-4 BBS Network

Location: Rochester, NY USA

BBS: 716.473.4070 / 716.756-4300 / 716.756.4316

Telnet: multicom.org (199.190.113.3)

Web: multicom.org

Software: The MajorBBS, Total Nodes: 128, Pay?: NO

Says "Future Sex" magazine, "...hosting sex chat for 10 years...admit the lust in your heart and other transgressions in confessions..." Discussions here include the ups and downs of meeting people in cyberspace and takes place in a smooth interface with several different ways to exchange public and private messages and access files, images, shareware and Usenet newsgroups. Isle-Net is also the home of Tarot44, the online card reader.

Richard S. Mark started the "Guide to Select BBSs" in November of '94 with only 25 systems. He makes his living as the System Administrator of a six-county WAN for the State Attorney's Office in Gainesville, Florida. In his spare time, he co-sysops Dragon Keep, a 64-node Internet BBS, writes magazine articles, and works on his upcoming "Internet BBS Book". "The book project is really the most important thing I'm working on. It will be the world's first and only travelogue of all Internet BBSs," Mark said.

Now you can offer your callers access to the Internet right from your PCBoard BBS. Your callers can use

SLIP or PPP to browse the World Wide Web with graphical web browsers or use any of the text-mode applications as though they are a part of the BBS itself-including Telnet, RLogin, FTP, Gopher, Archie, Finger, Ping, Whois and NTime.

The Battle Begins

have a confession to make. I'm a dyed-in-the-CPU Macintosh user. Not that I'm not Windows-savvy — I use Microsoft's top operating system almost every day. But I cannot characterize myself as much of a PC fan.

That's why I was so surprised when I finally booted up Uncle Bill's new Web browser, Internet Explorer, on my Mac. Turns out it's...it's not bad. In fact, it's quite good. (No, this is not a late April Fool's joke.)

You see, Internet Explorer supports nearly all of Netscape's tags (excluding frames, Java, and inline plug-ins like Shockwave), and it even includes some well conceived innovations, like sounds that play while a page is loading, colored table cells, and inline .AVI video.

If you ask me, the battle of the browsers has begun: There are now two distinct dialects within the World-Wide Web. And if you're a Web site designer, you'd better become bilingual.

If you don't already have a copy of the Internet Explorer

browser, you can download it from Microsoft's Web site, at www.microsoft.com/Windows/IE/IEXPLORER.HTM.

Impersonating Netscape

Internet Explorer actually supports most Netscape-specific tags. It also supports the Spyglass standard for client-side imagemaps, which means this innovative technique for coding imagemaps is about to become ubiquitous.

Internet Explorer does at least one thing that's a bit unorthodox — it lets you spoof other browsers (like Netscape) so sites that automatically provide different content

to different browsers will serve you just as if you're using Netscape Navigator. This can cause a little confusion; there was a small furor on the Net back in January when a prominent Web site administrator became convinced that a Java-enhanced version of Netscape for Macintosh had been released. (In reality, someone had used Explorer to create the phony agent log entries.)

It's good to know that Internet Explorer will deftly handle most Netscape-enhanced Web sites, since much of the Internet has adopted these tag sets. But Microsoft has built on this foundation, and some of the new features are worth trying out.

Sounding off

Back when Netscape was getting its start in the winter of 1994, a number of fledgling Web hackers publicly lamented the inability to create a "splash sound" that would load and play automatically when someone visited their Web page. Apparently, someone at Microsoft was listening, because this feature is present in Explorer's custom tag set. You can choose to play WAV or au sounds, or even a MIDI soundtrack.

Although Explorer-enhanced commercial sites are still surprisingly rare, some personal pages make good use of the new extensions. For instance, University of North Texas student Keith Miller's MIDI-oriented Web site at http://www.unt.edu/~kmiller/, includes a full soundtrack that accompanies the loading of the home page.

have scrolling text on his home page, taking away from the gee whiz factor and lessening the impact of a marquee. But a well-designed page can make use of this feature — or leave it out. It's up to you. If you choose to include a marquee, there are a variety of attributes

ole Boolean attributes or for attributes that can a values at the same time. It is represented by a seck box fields, each of which has the same selected check box generates a separate

This can be used to draw attention to a particular place in a table, as part of a psychedelic Web page layout, or just to add some flair to an otherwise ordinary layout device.

Non-Microsoft browsers will just see an ordinary table (if they support tables, which most browsers these days do).

Internet Explorer also supports nonscrolling backgrounds, or watermarks, and the ability to adjust the top and left margins for text. You can also select the font you want users to see your text displayed in, and even pick various backup choices in case the user doesn't have your font installed on their system. http://www.microsoft.com/windows/ie/ie20html.htm. Even if you still plan to design for Netscape, you may want to include a few of Microsoft's little innovations — especially since other browsers will simply skip them (if they don't adopt them).

Oh, and if you're a Mac user, you should know that a Java Developers Kit — complete with applet viewer and some sample applets — is available from Sun Microsystems for free on the Net. (It's already offered for Windows 95/NT, and by the time you read this there may be a Windows 3.1 edition ready.) Visit http://java.sun.com/JDK-1.0/ to download your copy today.

Overheard on the Net

"Subtlety is the art of saying exactly what you mean, and getting out of the way before it is understood."

The site also makes elegant use of what some have dubbed Microsoft's equivalent to Netscape's blink tag: the marquee.

Make your marquee

The big difference between Microsoft's marquee and the now infamous <bli>blink> tag is that marquee is actually useful. It performs a task — scrolling text — that until recently required the use of Java to create as an inline feature for a Web page. In a way this is bad because every Joe and his dog will soon

Turnoff Enlightehement

ON FLUORESCENT TUBES,
WEB OD, AND,
OF COURSE,

Without fail, at some time during an average week a co-worker will stop into my office to spew a stream of mindless chatter. They notice the fluorescent lights are off and that I am working via soft light from a desk lamp (and the glow of my computer) wherein they take it upon themselves to light the screaming tubes of fluorescence buzzing overhead. At this I usually gasp and cover my face, begging them to turn it off. Yes, I hate fluorescent lights. In fact the way I see it they mark the decline of Western civilization. Crazy? Push on, dear reader, and I shall explain why the lightbulb — not to mention the forever-loading Web page — are toxifying our souls.

The Internet is a beast that is now a lifestyle. When my cable goes out, it bothers me. When my Internet provider crashes, I am infuriated.

Must send email now...

Are you tired? Strung out? Look around and you will find the answer why.

NAPPING.

You can start by blaming Thomas Edison, as he has forever changed our way of life. The light bulb made it possible for humanity to vanquish darkness, and, according to some studies, we are literally zombified as a result — we are wiped out, and sleeping 20 percent less than people 100 years ago did.

The human biological clock has been wound to an unbelievable tension. Scientists describe it as a permanent feeling of jet lag. The biological clock resets itself according to light levels, and has a great effect on circadian rhythms (these regulate the metabolism, body temperature, and secretions of hormones).

For our ancestors, the onset of darkness sharply curtailed many activities. With the onset of round-the-clock artificial daylight, there is an ever- present sense of urgency. This is where the Internet comes in.

The Internet and the computer are simply tools. As I type this column late at night, my Hardy Boys look-a-like editor is waiting to receive a piece of material via email. I can effectively work around the clock thanks to the Internet.

I asked a colleague what his biggest gripe about the Internet was and he said, simply, "No matter where I go, my work is there." This is a profound problem, and it is reflected in numerous television and print advertisements. Ad agencies are playing upon this angst. A gentleman pontificates how he is very in touch, on the Web, surfing the Net, "I am cyberman!" he proclaims. "So why am I so out of touch?" The following scenes show him gleefully racing through gorgeous valleys in the car that has now set him free through consumption. Other ads show people in beautiful settings — by mountain streams, in fields of hay happily click-clacking on their laptops.

A fellow journalist told me about her friend who writes for computer magazines. He became so fatigued from round-the-clock emailing and "cybersurfing" that he canceled all Internet access for two months, just to obtain a grasp on the insanity and gain a bit of peace.

Don't get me wrong. Love the computer. Love light for that matter. The Web is a great thing. However as I sit for what seems like days waiting for graphics-strewn pages to load, my rods and cones singe from staring at the screen. Monitors are poison.

A marketing executive at Panasonic recently told me that most monitors fry your eyes. For this reason, I want cable modem access. Bring on the gijillion meg-a-second pipe! I'm tired of staring at goofy garbage load on my computer at 2 a.m., especially since I've waited forever to see it.

The development of "intelligent agents" for the Web will hopefully extinguish some of this wasted Web use. I want the computer to find things for me that are interesting and intellectually stimulating — not increase my ratio of wasted time.

At a recent Internet expo, I visited the folks at www.ffly.com. This new service on the Web lets you design your intelligent agent and then it investigates all other members' agents. When it finds matches on favorite entertainment items (books, movies), it brings back a list of things you might also be interested in. Firefly also introduces you to other people with similar interests and allows you to chat (real time) with them.

This satisfies the hunger for a sense of community deprived by the boxy suburbs. (Hopefully the masses will realize that BBSs have always provided this sense of unity, and are now available on the Net.)

The Internet is a beast that is now a lifestyle. When my cable goes out, it bothers me. When my Internet provider crashes, I am infuriated. Must send email now. Some experts have said that the angst resulting from 24-hour "daylight" and the never-ending workday is unique to the Western lifestyle. Other cultures take siestas. When it becomes dark, the tools are laid to rest...Not ours.

According to MIT historian John Staudenmaier, the daily disappearance of the sun once lead to spending time in the evening on less urgent, more sensual matters. Now, after the sun goes down, we turn it on inside.

Regardless of the utility or the detriment of light emitted by the monitor or the overhead light, these have created a drastic affect on our lifestyles.

Scientists recommend that we go to bed at the same hour every night, even weekends, and get eight hours of sleep. Every time you turn on a light it effects your biological clock and will change your metabolism and sleep patterns.

With the aforementioned in mind, here some helpful tips on making the world a groovier place in which to live

- If a Web page takes to long to load, email the webmaster and explain how your biological clock is thrown into chaostrophy waiting for it to finish. Or use a text-based browser.
- 2 If an important project needs to be emailed immediately, send a quick note explaining how it is necessary for you to explore pre-enlightenment ideas of darkness and sensuality in order for efficiency to occur.

- 3 When in doubt, blame the tool! Remember that more relaxed cultures utilizing romance languages translate "I dropped the glass" as "the glass fell from me." It's not your fault. Period.
- All non-work activities are now part of work. Leisure time spent pounding beers and watching TV is now "research." One must keep up on this changing world of ours! Watch cable! Surf the Net! Tell your boss you were doing research on "New Media Ventures," and want to make sure other companies aren't going to make as much money as your wonderful business will. And be sure to deduct your cable bill from your taxes.
- 5 Brainstorming is work, even if it falls under the domain of day-dreaming. Invoice them for this.
- 6 A large bar/meal tab means "WEB PAGE DEVELOPMENT" on the expense report. Use capital letters. It communicates urgency.
- 7 You need to go to any computer conference possible to insure your company stays on top. Tell your boss how much you learned be vague.
- **8** When in doubt, upgrade! "I can't possibly get any work done without a fast computer and a T-1 line."
- **9** Send lots of memos.
- 10 Edison took catnaps, you should too. Sleep at work. When the boss startles you, say, "I had the most brilliant idea on New Media ventures, and when you turned on those blasted fluorescent lights, I lost it."

Lazlow Jones writes and produces the Underground Technofile for the Underground Network, an alternative radio satellite network in New York. The Technofile is syndicated on over 47 stations nationwide. Email him at lazlow@undernet.com or check the Web at www.undernet.com.

To qualify for possible review in BBS Notebook, call The Livewire BBS at 609.235.5297. From the main menu, type ADDBBS and follow the prompts.

Tunanet

Sysops: Todd Heinz & Paul Guzyk
BBS Location: New York, N.Y.
Data Access #: 212.475.3100
BBS Software FirstClass v. 2.6

It is 2 a.m. in the East Village...

So goes the greeting that confronts visitors to the Web page that accompanies the cutely named Tunanet BBS. The time changes, of course, depending on when you actually call in, but somehow the middle of the night seems the most appropriate time to sample the off-center ruminations of the board's 600 or so members. Stop by and you can choose from a selection of conferences that range from current events to discussions of the best public lavatories in New York City. Or you can download a JPEG image of the Foo Fighters, Bjork or some musical act even more outside the pale of the pop cultural mainstream. Or you can chat, in either a public or a private chat room (the latter being a nice extra included in the FirstClass software on which the board

Best of all, it's a Macintosh-based board (forgive me if my prejudices

show). To be sure, you can get in using just about any terminal software, but your best bet is to get the client software (Mac or Windows) which comes pre-configured for you. Then call in to get the most out of the elegant simplicity of the client's GUI and the board's outre graphics, which look stunning when compared to many other boards out there.

Aside from being geared toward Mac users, the board is a good find for the fact that it provides full access, including an Internet email account, free of charge. The connection to the Net is made through the sysops' T1 line.

It's possible to do this, Todd says, because the board is only part of the sysops' business of providing SLIP/PPP accounts, for which there is a charge (the going rate of \$20 per month for a personal account).

"We continue to run the BBS as a community service," Todd says. "Since we are trying to make money off the Internet, the BBS is an attempt to give something back, significant or not. Because of our business, it is not that big of a deal to keep the BBS up...At this point it sort of runs itself."

Besides running chats, the board has 15 message areas and 10 file areas, some "considerably more active than others," Todd says. Thematically, the conferences are a grab-bag, with titles that aren't always very illuminating (the

title "Pavlovian Media" might wear its attitude of social commentary on its sleeve, but what do you think "Yumm!" or "The Apology File" might be about?).

What ties everything together is the mixture of wry worldview and entertainment/art focus that characterizes Manhattan's radical-chic East Village, where the board is located.

"Our board is not necessarily aimed towards anyone," Todd says. "I guess you could say it is sort of an experiment to see what happens when you set up a BBS and do not attempt to enforce any rules. Anyone has the option of setting up their own file or conference area. The content is less an extension of the sysops than of the users."

When you first log on, the screen you see presents a selection of five icons: Mailbox, Tunanet & You, Music, Open Bar and Directory. The Mailbox button is pretty self-explanatory; so is Music. Tunanet & You opens a directory of user-service functions (settings, help, etc.); Directory is a listing of all the file areas and conferences, and Open Bar is a smorgasbord of urbane conferences, which run the gamut from the self-consciously campy (the aforementioned bathroom talk) to higher-brow political discourse. It's kind of like sitting in on the conversations in the type of hip, downtown bar that doesn't advertise, because everyone who would go there already knows about it.

23 ay

1996 BBS Magazin

Monter

Harrisonours (42)

Madi

The file areas are blessedly full of the type of shareware (Stuffit, etc.) that Mac users want but can't get from most boards. Not to be exclusionary, the board offers Windows software as well.

Todd and Paul run the board from a pair of machines: a Macintosh IIx that acts as the BBS server, and a Quadra 630 for the UUCP connections. Together, the machines provide two gigs of disk space.

What is done with that storage space is mostly up to the users, Todd says.

"I guess what makes us unique is that we do not really ask anything from our users," he says. "Except maybe to upload files or respect the other users in the conferences."

Beyond Reality

Sysops: Paul Aljets & Mike Stoddard **BBS Location:** Marion, IA Data Access #: 319.373.5355 **BBS Software:** Synchronet v. 2.20

Beyond Reality, despite its name, is in fact a very down-to-Earth board with modest expectations and a fair idea of who its users are and what they want from a board.

Run from the basement of co-sysop Paul Aljets, the board occupies that middle ground between boards that are run strictly as hobbies and those run as businesses. Paul and Mike charge for full access, but most users don't pay it. The board offers limited Internet access, but the plan is to upgrade within the next eight months. At the moment, Paul and Mike have their feet in both worlds, but it appears they're committed enough to the board to want to see it grow.

Files don't seem to be the board's main stock-in-trade. The same can be said for chats: "With...several other large 'chat' BBSs in town, not many people chat here," Paul says, "For the most part we are used primarily for Doors and messaging."

The message areas contain a healthy mix of local postings and echoes from Fidonet and other networks. Four game Doors are available: there are role-playing games, including Usurperm Barren Realms Elite, Solar Realms Elite,

Falcon's Eye and Mo's MUD. Another Door launches space-simulation games, including the ever-popular TradeWars, and behind yet another Door is the ubiquitous Legend of the Red Dragon.

"We have registered LORD," Paul says, "with over 45 of the add-ons to the game. We are also a member of a LORD-Net Network that links this BBS with over 30 other BBSs so as to play this game on an Inter-BBS format."

Full access to the board costs \$30 for a year. What that gets you is 90 minutes of online time per day and unlimited downloads. But it's not like you're heavily penalized if you choose not to pay: in that circumstance, you get 60 minutes of time per day and five megs of free downloads. Of the board's approximately 250 users, about 20 have chosen to spring for full access, Paul says.

As for hardware, the system runs from a Novell Netware 4.1a FileServer system with 12 gigs of file storage. In addition, there is a CD-ROM drive equipped two seven-disk changers.

The nodes are run from a pair of 486 machines: a 486SX/25 with an overdrive chip, and a 486DX/33 that runs Microsoft's vaunted Windows '95.

The BBS software is Synchronet. "We chose Synchronet for it's multinode capabilities," Paul says, "as well as it's easily programmable interface."

There are currently no plans to upgrade the software any time soon, but Paul says the board will evolve into an Internet access provider, offering PPP accounts for as little as \$15 per month. A good deal, but, frankly, a risky business decision in an age when behemoths like AT&T have decided to jump into Internet game. Still, you gotta wish them luck.

Sysop: Donna Rahn **BBS Location:** Lebanon, PA Data Access #: 717.273.6508 BBS Software: RoboBOARD FX v. 1.04

Up All Night is another free board that should appeal mainly to local callers. Sysop Donna Rahn has configured her board to favor files and Doors over message areas. So don't log on expecting to find a lot of meaty discourse (or even trivial discourse) with other members.

Since access is free, users should also not expect to log on and find a lot of Internet bells and whistles. "If I had Internet, I'd have to charge, and I want this to be a free board," Donna says.

Still, there are plenty of file areas to browse through, spread among 15 CD-ROMs (there are three CD-ROM changers online) and the 850-meg hard drive linked to the 486DX/33 that houses the system.

The files users can choose from include RIP graphics, utilities, painting programs, pictures and software from a company called T&J Software (the board bills itself as a beta testing site for them).

Probably the most interesting feature of the board is its selection of specialty Doors that launch some neat little surprises. A short list includes a database of federal jobs, an online Bible, a database of medical information, a database of legal information, a census Door; even an "All About Dogs" Door.

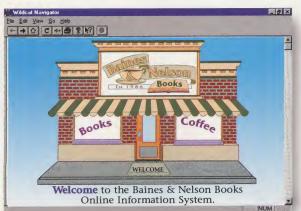

One Door launches a database of recipes. Fairly routine, right? Perhaps, but here's a neat feature: ask it to make you a meal and it will. Actually, it only plans a meal, but the ideas it has are good ones. For me, it suggested an entree of Spaghetti Primavera with vegetarian lasagna, Calabacita salad, Greek stuffed tomatoes and a peach cheese pie for desert. Yum. The only thing I was unsure about was the beverage: does anyone know what Glogg might be?

Another interesting Door (which I have seen before) launches a database of endangered species, from mammals to lichens. Select it, and it will choose a species at random, and then give you the species' vital stats. Pretty educational, I suppose.

And of course, there are the games, which include some adult titles. Some of the others you can choose include "Robo Lotto" and video poker (part of a "games of chance" Door), and video dodge ball.

The board appears interesting enough to attract a following of loyal users. And if I have one complaint,

Why settle for a you can have the

Open up to a new chapter in online systems: Wildcat! 5 for Windows 95/NT

Are you considering the World Wide Web for your online needs? Consider this. A web site is great for viewing documents, but your own online service can give you more. Messaging. File management. Interactive teleconferencing. Data security. Your own online community where members want to visit and come back again and again. But where do you turn to get your own online service?

Turn to the company that's been creating online software not for 10 months or 10 weeks, but 10 years: Mustang Software. Then open up to a new chapter in online systems with the power of Wildcat! 5 for Windows 95/NT. It's a 32-bit online information system that combines the browsing

ease of the Web with the powerful features of a bulletin board: the ultimate information server. Wildcat! has the power to provide an online solution for nearly any type of business wanting to get on the information superhighway. See how our fictitious bookstore, Baines & Nelson, uses Wildcat! 5 to create its online presence.

Wildcat! gives your members access to information through modem, LAN, WAN, and the Internet.

few pages when whole book!

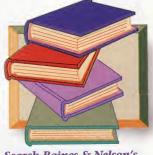

With Wildcat! Baines & Nelson's customers can send and receive e-mail quickly and easily.

Message Conferences

Wildcat!'s message conferences are similar to forums found on the larger online services like CompuServe. Each conference can have its own message base, files, bulletins, questionnaires, display screens and menus.

File Management

You can make documents, spreadsheets, databases and other files available through Wildcat's file management system. Searching and retrieving are as easy as pointing and clicking on an icon.

Search Baines & Nelson's archives with the Wildcat! file management system.

Security

Wildcat! gives you the power to define exactly which files, messages, and menu options your members can access. It's ideal for supporting different departments, offices, and even entire companies.

Free Wildcat! Navigator

The free Wildcat! Navigator gives your members access to services through modem, LAN and the Internet. Its point and click operation lets members browse your online service by selecting hypertext regions and icons.

World Wide Web Interface

The key to Wildcat!'s ease of navigation is its use of hypertext markup language (HTML). This is the same language used to create pages

Using the included HTML editor, Baines & Nelson easily creates news pages and bulletins to keep their customers up to date on bookstore news.

on the World Wide Web. Future versions of Wildcat! will include support for full-motion video

chat system.

Baines & Nelson expanded its customer service lines to include 24-hour contact via e-mail and real-time access through Wildcat!'s

Teleconference/Chat

Wildcat's real-time teleconferencing provides an exciting way for members to interact one-on-one or in groups. Moderated chats give members an organized forum for group discussions or question and answer sessions.

Polls/Questionnaires

One of the best ways of gathering information is through Wildcat's questionnaire interface. It's powerful and flexible enough to quickly gather demographic and marketing information and even process online orders.

and Virtual Reality. With the Internet Connectivity Package, members will even be able to navigate the World Wide Web through your Wildcat! system.

So why settle for a few pages? With a world of connectivity and powerful options at its disposal, Wildcat! is truly the online solution for your business. To experience the Baines and Nelson Book Store for yourself, download the Wildcat! Navigator from Mustang Online. You can reach us at telnet://bbs.mustang.com, http://bbs.mustang.com, ftp://bbs.mustang.com, or through modem at 805-873-2400. If you'd like to discover how Wildcat! is creating online solutions for companies, call our Solutions Office at 1-800-208-0616 for a free consultation.

Wildcat! 5 Add-ons:

- Internet Connectivity Package
- Internet Service Provider Package
- · Microsoft Exchange Gateway
- wcCODE Development Language
- · Wildcat! Billing

- · Bulletin Board Source Code
- ODBC Database Support
- Wildcat! Reports
- Software Developer Kit
- · And Much More!

Mustang Software, Inc. • 6200 Lake Ming Road • Bakersfield, CA 93306 Voice 805-873-2500 • Fax 805-873-2599 • BBS 805-873-2400

oddly enough that would be it. While it's great to see a sysop create a popular board, it can be frustrating when you're trying to get through the bottleneck and log on.

200

PC Picks

Sysop: Robert Pardi BBS Location: Bronx, NY Data Access #: 718.409.2798 BBS Software: Wildcat! v. 5.0 A major item of interest with PC Picks is the fact that it is a beta-testing site for Mustang Software's ultra-slick Wildcat's 5.0 software. If you're curious, you can log on and download the Wildcat Navigator as well, according to sysop Robert Pardi.

As for the board itself, it offers the usual mix of files and messages, with the emphasis on the latter. Chats and game Doors are available as well.

The board's eight message areas feature a light sprinkling of widely diver-

gent topics. There is an IBM conference (the board runs from the Windows 95 operating system); a movie forum; a general public message area; and, a trolley forum.

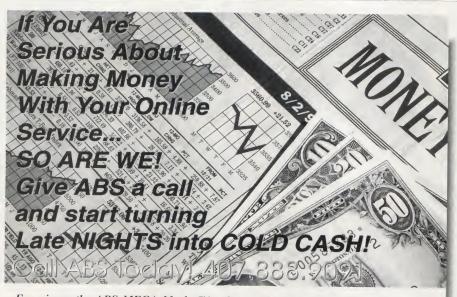

Wallen Ludlow

Yes, a trolley forum. It's what it says it is: drop by, and you can sample conversation about rail cars of all kinds — trolleys, subways — what have you. One woman was touting a trolley museum in Connecticut; if you're into trains, you might be intrigued enough to stop in.

The 153 file areas are fairly comprehensive, and feature the usual selection of utilities (for both Windows and OS/2—now there's a case of not playing favorites). In addition, there are games, RIP graphics, spreadsheets and other sundry shareware, FAQ's and more.

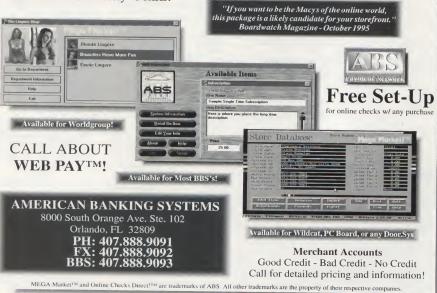

The game Doors make an attempt to be a little saucy: there's a game called Studs; a complementary game called Studettes, and strip poker (alone, with your computer. Hmmm). There are of course more conservative games, such as solitaire, etc.

Email appears to be available only to members. There is no word about Internet connectivity. But then there's no word about cost, either. So for the money — which is none — PC Picks appears to be a good deal, at least for local callers.

(98) Cambridge

Experience the ABS MEGA MarketTM software. Mega Market is a special series of shopping, subscription, and money-making modules designed for your online system. Collecting money from your callers will never be a hassle. ABS software comes complete with a Checks Direct!TM (OCD) account, which allows you to instantly accept checks online from your callers. Everyone is pre-approved for OCD and set-up with ABS is ABSolutely *FREE!

90% of the people who own a modem have NEVER used it! Tap this sleeping market! Provide these potential new users

Are you a font maniac? You know what I mean — the kind of person who collects fonts from all over, all the time: legible text fonts, exotic display fonts, limited purpose headline fonts, dingbat fonts, picture fonts ... you name it! If so, this month's for you. I've sought to assuage the appetite of all font maniacs out there. Not

only will I tell you about some great shareware and freeware utilities to view and manage your ever-growing font collection, but I'll show you a few cool fonts you'll want to look for on your favorite BBS.

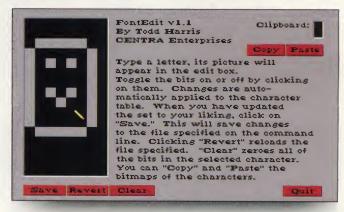

005

Font Editor 2.4

FE.ZIP by Todd Harris **CENTRA Enterprises** 3330 N. Jackson Avenue Tucson, AZ 85719 Email: Jenor@aol.com

Font Editor is a program that lets you customize the DOS environment font. It consists of two programs: FONTEDIT.EXE, which is the editor, and FONT.COM, the font loader.

Use FONTEDIT to load a font for editing. If the font does not exist, the default font is loaded and changes are saved to the name you specify. Type the character you want to edit to have it appear on the editing palette. Then click to turn the pixels that make up the character on or off. By doing this, you

Font Editor lets you change the appearance of the default DOS font.

can change the look of characters. A clipboard feature makes it possible to copy characters and then paste them into other character positions as templates.

When you're finished editing the font and have saved your changes, quit FONTEDIT and enter FONT /Fyourfont, replacing yourfont with the name of the font you modified. Your modified characters will be installed as the default font. If you decide you don't like the new font after all, you can also use FONT to restore the default font.

Font Editor comes with complete documentation that explains how to use it. It also includes a number of custom fonts created by the author. Font Editor is distributed as demoware — the version you download will only be able to edit uppercase characters. When you pay the \$3 shareware fee, you receive the fully functional version via e-mail. If you want it on disk, pay an extra buck.

Font F/X lets you view installed fonts a variety of ways to help you decide which font is best for a specific application

Windows

Fnnt F/X 1 32

FFX132.ZIP by David W. Palmer Bear Steel 5131 South Aleppo Drive Tucson, AZ 85706

If you have trouble picking the perfect font for a specific application, Font F/X might just give you the information you need to help you decide. This Windows application lets you compare a font at different point sizes, compare multiple fonts at the same point size, and see what a font looks like at an angle.

Font F/X displays the name of a font, as well as the font size, in its typeface. Use the Select Font(s) option to display a dialog box that lists all installed fonts and lets you specify special effects, size, lines, and other options. If you choose one of the Circle Location options, Font F/X displays the selected font as a radiated circle, which shows the characters at various angles.

The Color option lets you specify a foreground and background color for screen display. Either click a color to select it or enter values in Red, Green, and Blue edit boxes to create a custom color. The Metrics option provides exact measurement information for the current font and size. If you don't like the characters that are displayed, you

can use the Char option to specify a text string to appear after the font name - or instead of the font name. You can even use Font F/X as a front end for a font installation and removal program and for the Windows Character Map program.

Font F/X comes with a ReadMe file that provides basic information about

the program, as well as detailed online help. It is distributed as shareware. Pay the \$20 registration fee to get a registration code that removes the shareware reminders.

FontSpec Pro 7.1

FSP71.ZIP by UniTech 2697 McKelvey Road Maryland Heights, MO 63043

If you need more than just a basic tool to examine fonts, try FontSpec Pro. This full-featured Windows program lets you view, print, and manage both TrueType and PostScript fonts.

FontSpec Pro's Viewer screen lets

you see a sample of customizable text in the font and size you specify. Font size can be from 6 to 99 points. The scrolling list of installed fonts displays each font in its own typeface, making it easier to find a specific font. Change the character template, justification, and style with a click of your mouse. To change the font size, use your mouse to turn a dial or click arrows

beside the font size indicator.

If a printed font sample or specimen sheets is what you're after, FontSpec Pro has you covered. It offers templates for one column, two columns, full sheet, and keyboard layouts. You can specify what the sheet's sample text says, as well as the font, font size, and other settings. Print sample sheets on all fonts — even those that are not installed.

FontSpec Pro's font management features let you create font groups collections of fonts often used together. Once created, you can install or uninstall any combination of font groups quickly and easily. This makes it convenient to keep only those fonts you really need installed, thus freeing up RAM and speeding up Windows. A preview feature lets you see what a font looks like before you install it. If you decide you don't want to keep it, you can delete it from Windows or your disk right from FontSpec Pro.

The program comes with complete documentation that explains how to install and use it while also describing all its features. Balloon Help (borrowed from the Macintosh operating system) displays an explanation of a control item when you point to it with your mouse. FontSpec Pro is distributed as shareware. Users who pay the \$29 shareware fee get the current version (minus the shareware reminders) and some free fonts.

CONTINUES...

FontSpec Pro offers a wide variety of font-related features, including the

Three DOS/Windows Fonts

FilmStrip

FILMSTRT.ZIP by Dennis Palumbo 104 Barrymore Boulevard, Dept. A1 Franklin Square, NY 11010

This interesting display font, which is available in both TrueType and type 1 formats, positions each character in the middle of a graphic that looks like a piece of film, complete with sprockets. Characters typed with the font look like they're on a continuous strip of film. The font is distributed as demoware — the file you download will include only a handful of uppercase, lowercase, number, symbol, and accent characters. The full font, which is sent to users who pay the \$12 shareware fee, includes 211 characters.

Kellu

KELLY.ZIP by Nick Lynch 164 Hatler Street Fort Leonard Woods, MO 65473 Email: tonylynch@aol.com

Available in TrueType format, Kelly is a complete shareware font that includes normal, bold, italic, and bold italic character sets. It's a clean looking font with rounded edges that should look good in most point sizes. If you use it, pay the \$5 shareware fee. Kelly's author also offers a font of your handwriting for only \$25.

FilmStrip. (A Demo font that doesn't include all the characters.)

Kelly. Rounded corners, good at almost any size.

TQF Animals. Here are a few characters from this demo font:

を手を反反とうとのでは、

TQF Electronics. Here are a few characters from this demo font:

TQF KeyCaps. Here are a few characters from this demo font: 6789QRSTUVWPM20GLNOA5C

TQF Plants. Here are a few characters from this demo font:

*中夏台内安安安村企图《新山东兴·

Here are the fonts in this month's Windows font sampler.

TOF Animals, TOF Electronics, TOF Heycaps 2, and TOF Plants

SY01SAMP.ZIP, SY02SAMP.ZIP, SY03SAMP.ZIP, and SY04SAMP.ZIP by G. Bernor 9044 Bayou Drive Tampa, FL 33635-5925

If picture fonts or dingbat characters are more your style, check out G. Bernor's offerings. I found his picture fonts for Animals, Electronics, Plants, and Keycaps, but he has at least six more. The fonts you download will be demos that include only some of the characters in the font, but when you pay the \$1 shareware fee for a font, you'll get the full font via email. Or pay \$7.50 to get the entire collection on disk.

Macintosh

Fonts Manager 1.5.8

by Ed Hopkins Ad • vantage 1807 Prairie Star Lane Round Rock, TX 42664-2618 Email: darth@apple.com

Fonts Manager uses an Extensions Manager-like interface to quickly install and uninstall fonts.

There are two main problems with having hundreds of fonts

(or even dozens of them) installed in your system. One problem is that installed fonts increase the size of your Mac's System heap — that means they take up RAM as well as disk space. The other problem is that the more fonts that are installed, the longer font menus are.

Font management software helps solve both these problems

by making it convenient to install only the fonts you need when you need them. Fonts Manager is a good example. It uses the same kind of interface as System 7.5's Extension Manager to let you create sets of fonts. When you want to load a specific set, simply open the Fonts Manager control panel, choose the set you want from the Sets pop-up menu, and close the window. Click a button to restart your Mac and you're all ready to go.

Like Extensions Manager, Fonts Manager maintains two folders for fonts. The Fonts folder, which is normally part of the System software, is where installed fonts go. The Fonts (Disabled) folder is where uninstalled fonts go. When you click the Fonts Manager close box after changing sets, it moves fonts from one folder to the other, thus installing or uninstalling them.

Fonts Manager offers a number of other useful features, like the ability to quickly open a font suitcase to view the fonts inside it. I wasn't thrilled with the look of its interface, which adds a lot of colors you wouldn't normally find in standard Macintosh control panel windows — but then again, I'm a purist when it comes to the Mac.

Fonts Manager comes with a ReadMe file that includes installation instructions and troubleshooting questions and answers. It requires System 7.5 or later (or System 7.1 with AppleScript 1.1 installed.) Fonts Manager is distributed as shareware — use it for up to 30 days before paying a \$10 shareware fee. When you pay up, you get a registration code that removes the shareware reminder notice.

Fonts On Parade 1.0.1

by Bradley Lindauer Email: blindauer@aol.com

If you're looking for a small, simple utility that'll quickly show you what the characters of an installed font look like, check out Fonts On Parade. This 18K application, which uses only 64K of RAM, lets you view any installed font at any font size or standard style.

Launch Fonts On Parade to get started. Then use commands under the Options menu to customize the display text, choose a font, a size, a style, and case. The Fonts On Parade window instantly displays the text with the settings you specified.

Fonts On Parade will run on just about any Mac with any version of the System software — it isn't picky. It's distributed as freeware, but the author loves getting email, so if you use it, drop him a line.

Three Mac Fonts for Your Collection

Blood of Dracula

by Brad Nelson Brain Eaters Font Co. 1947 N. 180 W. Orem, UT 84057 Email: bradzig@aol.com

Blood of Dracula. Here's a fant you might want to save for Hallowe'en.

Available in either PostScript Type 1 or TrueType formats, Blood of Dracula is only one of a dozen different fonts available from Brad Nelson and Brain Eaters Font Co. It reminds me of the titles on movie posters for horror flicks. Use at point sizes of at least 24 for best legibility. Blood of Dracula is distributed as shareware with a registration fee of \$5. Other Brain Eaters fonts are either free or \$5 each.

Drip

Email: FuzzBomb@aol.com

Drip. This casual font look like something you might find in a comic strip.

Available in TrueType format, Drip is a casual font that reminds me of characters drawn by a left-handed person. They're light on top and heavy on the bottom. Use at point sizes of at least 24 for best legibility. Distributed as freeware with no documentation at all.

Fonts On Parade

The speedy, chocolate-colored fox leaps over the lazy canine.

Fonts On Parade offers a basic way to view the characters of a font. Since it's RAM requirements are so small, you can leave it running in the background while you work.

Magdeburg

by Dave Nalle Ragnarok Games Scriptorium Font Library P. O. Box 140333 Austin, TX 78714

Magdeburg. This font is ornate, but legible enough for serious use.

Magdeburg is only one of dozens of fonts designed by Dave Nalle for Ragnarok Games. Scriptorium fonts are original display fonts based on calligraphy, foreign languages, or decorative arts. Magdeburg is a relatively simple calligraphic font best used at large point sizes. It is distributed as shareware for \$5, but \$15 will get you a disk full of fonts, including Magdeburg. All Scriptorium fonts are available in both PostScript Type 1 and TrueType formats.

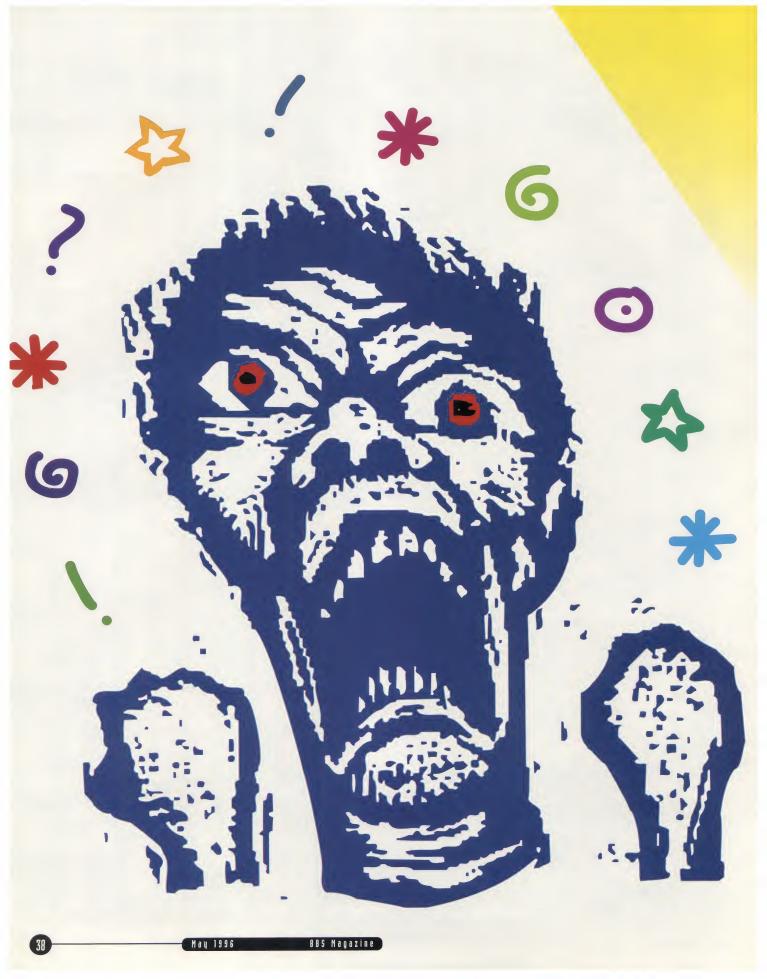

THese fonts are in this mont's Mac font sampler.

Finding These Files

If you can't find these files on your favorite BBS, try mine. The Electronic Pen BBS (201.767.6337) is a two-line FirstClass-based system in Harrington Park, NJ. Connect with the freely distributable FirstClass Client software for a great graphic user interface. Once online, look in the Sharewaring conference folder on your Desktop for all the files covered in this column.

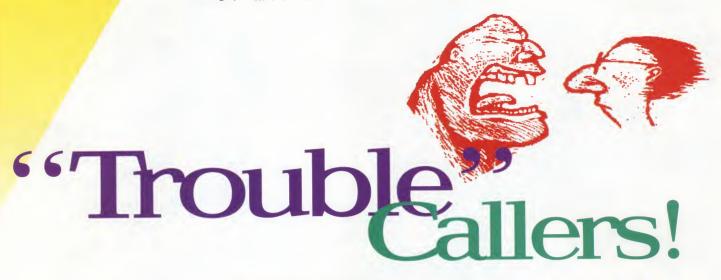

If you're on the Web, you can FTP these files from the Giles Road Press Web site at www./intac.com/~gilesrd/ and link to the Sharewaring page from there.

Maria Langer is a freelance writer and computer consultant who has been running a BBS since 1989. She is the author of ten computer books, including the brand new PageMill for Macintosh: Visual QuickStart Guide for Peachpit Press. Contact her at gilesrd@intac.com.

Macintosh Online

BY MICHAEL A. KUYKENDAL

THEY FLAME, LEECH AND ARE GENERALLY DISRUPTIVE —

IF THAT'S PROBLEM, HERE'S A SOLUTION

I'm speaking to sysops of all stripes today — Mac, PC, C128, you name it. The subject is as old BBSing itself and is an equal opportunity nuisance. It's ugly, sometimes hurtful, and can stand between you and lots of new (happy) subscribers. I'm talking about "troublesome callers."

If you're planning to run a BBS for any length of time, you can also plan on getting many callers who are simply not nice, stir up trouble, and, in short, make your life miserable. I always emphasize tolerance, and in no way suggest differences of opinion/debating be categorized as symptoms of a trouble caller. But sometimes things get in the way of others on the BBS who are just trying to use the system. Now it's a problem.

So how do you deal with these callers?

• Admitting the Problem: First, you must acknowledge that there are such things as troublesome callers — not difficult for anyone who's been a sysop for any length of time. But there are varying takes on the topic. For instance I attended a BBS convention where a panel of sysops who run very large BBSs discussed this very issue. However when the question was posed to one individual on the panel, he said, "There's no such thing as a troublesome caller." The other panelists clearly disagreed, but it just goes to show "troublesome" is sometimes a matter of perspective. The ball's in your court as it were so suffice it to say if you are able to recognize someone or something as a problem, it is.

CONTINUES...

• The Anonymous Rant: What works for one individual may not be another's cup of tea. But with the anonymity that can occur on BBSs (people leaving false info such as a phony address, for instance) many individuals seem to have no problem telling you that your board "sucks." Anonymity brings a sense of bravado and feelings of "I know best." As a sysop you are going to get messages/feedback from users like this on occasion. I had one individual who flatly accused me of ripping off the community by charging for my board, that I should be ashamed to ask for membership dues. I proceeded to tell this person that the fees were not actually for me to pocket, but helped to offset costs like phone lines, buying new equipment for the board, and such. I also told the individual that I spent many hours of my own personal time running the board, helping people through the BBS, getting info and new files, and how much of my own money was invested, etc. This is a quick way to halt a complainer.

• Getting Burned: While this type of person may log on now and then, the most common type of trouble caller is the flamer. This is someone who publicly abuses another user in one of the message forums or online chat areas. With

chat, unless you or another co-sysop are actually online, it's hard to deal with this issue. Abusive messages are easier to catch and deal with if you have a moderator or two to patrol these areas; they can also help spark activity with new messages if discussions start to die down.

The easiest way to deal with this situation is to adopt a "non-abuse" policy for your board, and make all new users agree to the policy before they get full access. Simply put, the policy should state that if anyone is caught "verbally abusing" another user in any of the message areas, that user will have their access temporarily reduced. Further transgressions will result in that user being thrown off the board permanently. All of the major online services have some sort of "code of conduct" in their service agreements. (You didn't know you actually agreed to behave before you went online, did you?) When bumping a chronic trouble caller you can prorate the amount of the fees paid and send it back to them (or keep the money and state in your policy that they won't be getting it back if they abuse others on the board).

The Leech: Another type of caller that some sysops consider troublesome is the "leech." This is a caller who, upon gaining access to your board, immediately heads for your file libraries and proceeds to try and suck every file off your BBS. While downloading a lot of files doesn't hurt your board — and hey, they're a paying customer — the time that leech uses keeps others from accessing the board

accessing the board.

One solution (though a little complicated) is to allow new users to have full access to everything but the files sections. They can list available files, but not download. Then ask the user to request a two-week trial access to get to the files. After two weeks, send them a form letter saying that their trial period is up, and that you would like them to join your board (include info on pricing). If the caller truly appreciates your board, they will

sign up. If you can automate your host software to set up a two-week trial account automatically, then downgrade or delete the account after a fixed period of time (allow some time for a member's dues to come in), that would make things even easier. Disadvantages of this approach are the amount of tracking and editing of accounts you'll have to do and the possibility that potential users will be turned off by the process.

Another solution is to require an upload/download ratio. You give me one shareware file and I'll let you download 10.

Of course this is not a complete roundup of the kinds of "troublesome callers" you might face, but it should be a good start. If you have any stories of your own about troublesome callers you would like to share, please send them to me at the address below and I'll compile them for a future column.

By the way, graphics for this column are from CD-RON 2, a CD-ROM collection of 750+ great illustrations from Art Parts. Art Parts not only produces wonderful CDs, but has a monthly subscription service as well. Contact them at Art Parts, P.O. Box 2926, Orange, CA 92669-0926. Call them at 714.771.6754.

real-time

Online Lexicon

- ASCII American Standard Code for Information Exchange. ASCII values are assigned by individual characters for every number, letter and symbol on a screen when logged into a BBS, for instance. Not much in the way of graphics here.
- BAUD Frequently this is used to refer to Bits Per Second (BPS), as in "My modem can send at 28,800 BPS." In truth, Baud is how swiftly a modem can change its tone to indicate a bit.
- Beta When a software product is "in beta," it is being tested by a few (or many) to find bugs (problems and shortfalls) in the programming. Most BBS software is run through extensive beta testing before release. Sometimes this can take months or longer.
- Capture When you're on a BBS and see something (other than a file) you want to save on your own computer, you can capture it to a file in different ways, depending on the BBS.
- Chatting A popular method of communication on BBSs. The idea is to type in real-time (no delay) to another person or many others who are on the BBS with you.
- Download (Upload) OK, these are pretty self-explanatory. When you're downloading, your computer is receiving information from a BBS. When you're uploading, your computer is sending. Simple.
- Door Think of it as just that a doorway to another area in a BBS, often some kind of game you can play while maintaining your connection to the BBS.
- Fidonet This is an international "network" of BBSs. Fidonet news is exchanged among the BBSs so local BBS callers can read messages from and communicate with people all over the world.
- Flame If it burns, it's probably a flame. These are messages we all get now and then that are angry in nature and tend toward putting us in our place. Often, though, they're just a nuisance not to be taken too seriously (unless you deserve it).
- Kill Well, in the BBS world it just means to delete something: a file or message.
- Megabyte A megabyte, or meg, is 1,048,576 bytes, but usually referred to as a million bytes for simplicity.
- Page When you want to talk to the "sysop" (the person known as the system operator) of a BBS, you can page him or her and if they're in front of the BBS, a sound will alert them to you. You can usually expect a reply. No reply? Look around on the Main Menu of the BBS for something that refers to "Commenting to Sysop" and send a note that way. Try going easy on the paging, as sysops are usually very busy.
- Prompt When you're on a BBS and a command appears on the screen telling you to "Enter Password," for instance, that's a prompt.
- Shareware A mainstay of BBSing. Shareware is software that's released by the author for you to use free of charge. BUT, if you like it and/or use it beyond the period of time stated in the program, pay the author's fee. It's usually pretty modest and gets you free upgrades down the road. Plus, you'll be helping someone continue making software that ultimately makes your life easier, or a little more fun. See the beauty in it? Now how about shareware cars?

BBS Magazine May 1996

internet//with.ease

Finding. Any irtually

If you GOTTA search,

love introducing people to the Internet for the first time — especially the Web. Maybe it's a Zen beginner's mind thing, or maybe I'm just jaded by my T-1 and ISDN, but it's amazing to watch a kid's eyes bug-out at by the possibilities that suddenly flood into their craniums. Though after touring a few choice pages, the question always come up, "How can I find <fill in the blank with your favorite topic>?" Step into my search engine, kid.

Dave Kramer covered searching tools in his Webwise column last month, but I'm going to take things a little further, with a nod to all those newbies out there.

Finding info on the Internet is still dramatically harder than popping down to your local library and asking Mrs. Crabtree for a book on polymers and their uses.

There is no Internet card catalog. The closest thing we have are search engines, such as Lycos (http://www.lycos.com), Yahoo (http://www.yahoo.com), DEC's awesome Alta Vista (http://www.altavista.digital.com), Infoseek (http://www.infoseek.com), Excite (http://www.excite.com), and others.

Fittingly enough, search engines for the Web are powered by spiders, which are basically programs that scurry up and down the silken threads between links to locate pages and Web sites. These spiders return URLs and indexes of the visited pages, which are then placed into a database that in turn runs behind the search engine's Web page interface.

Sounds complicated. It really isn't. What is complicated, though, is using a search engine like a finely honed scalpel to

The Boolean Boogie

Though each search engine site valiantly attempts to make finding relevant info as easy as possible — generally by offering pre-chewed categories — fishing the Web like an expert requires knowing a few Boolean operators. Boolean operators

aren't Croatian phone company workers. Rather, they're a means of defining sets of information — remember those Venn diagrams from high school? No? Don't worry.

The primary Boolean operators you'll need are AND, OR and NOT. Starting to sound familiar? The trick is understanding how each one works and how each search engine handles them. Each one by itself is

thingOn Net

you GOTTA know how...

simple to understand and simple to use.

It's when you start serving up combinations of operators that things can get hairy. But if you remember the old SchoolHouse Rock episode, Conjunction Junction, you'll be slinging Boolean around like soggy old conjunctions in no time.

Let's start with NOT and get it out of the way since it's likely to be the one you use least at first. Expert searchers will tell you that NOT is the most powerful Boolean. But NOT only takes on its fantastic superhero powers when used with other operators.

By itself NOT is real easy but not all that helpful. Whatever search term you enter, adding NOT in front means "find everything but documents containing the following." For instance, to find documents that absolutely do not reference the word "munkins" you could enter: "NOT munkins." But this returns every other document, and in the case of the Web, that's a whole lot of pages.

While NOT is strictly a yes or no operation, AND and OR obviously offer more exclusive choices, and in doing so they narrow down and focus information.

In the case of OR you'll be served with documents that contain either of the search terms. For example, the search Boolean, "Pumpkins OR Peaches", returns pages containing either item. For its part, the search operator AND is the most defining. Use AND to get documents that include both terms. A search for "Peas AND carrots" yields pages containing both. It's not rocket science, but it does take some thought, particularly when you create compound searches.

To help remember how focused each Boolean operator is, picture a pyramid, with NOT at the widest portion at bottom, OR on top of it, and AND at the narrow point. This pyramid structure illustrates the amount of information each operator brings back.

The Search Tussle

Now that you're a Boolean expert, how do the various search engines handle complex searches? Some don't. Excite, for instance, doesn't offer Boolean searches. Rather it applies a "fuzzy AND" to the words you enter, which — according to Excite — searches using both AND and OR, with greater weight given to pages including both words.

For search hounds Yahoo offers AND and OR bowlines — if you click on the Search Options link. NOT isn't supported, but you can tune a search further by selecting whether the search words should be considered whole words or parts of other words.

Like Yahoo, Lycos lets you select AND and OR operations if you select the "Enhance Your Search" link, but it goes a step beyond by letting you define how "tightly" to match the search to words it finds in its database. You do this in Lycos via a pull-down menu of choices ranging from loose to strong matches. Lycos also provides a way to cast a targeted, though wide, net by making compound searching easy. Compound what? Look at the following: (gin and tonic) or ((vodka and oj) or (vodka)). This one search is composed of three searches linked together. Lycos let's you do something like this by setting a "match x terms" parameter where x is from two to seven. With this option you can type a series of words and set how many must match in your target documents.

Pretty neat.

The reigning capo di tutti capi of search engines, Digital Equipment's Alta Vista, gives you every Boolean operator you could want: AND, OR, NOT, and NEAR — which lets you locate documents where certain words are within ten words of each other.

CONTINUES..

Alta Vista doesn't stop

there. You can also enter in ranking words and the documents matching your Boolean search will then be listed in order according to the ranking words. But wait! There's more. Alta Vista also let's you define a date parameter to match search documents to a given start and end date very handy.

For my money, though, Infoseek offers the broadest range of search options and parameters. All the bowlines are there, plus you can locate documents where words are within one word of each other (great for those pesky computer terms) or within 100 words of each other. The downside is Infoseek forces non-standard search syntax upon you. Instead of actually typing in AND, OR and NOT, Infoseek uses "-", "+" and other symbols. Still, once you get the hang of Infoseek's idiosyncrasies, it's one powerful beast.

Putting the Search To Work

Of course much of the Web's appeal and usefulness stems from what I call the random book effect. Back when libraries were simply paper and books (when I wasn't getting into trouble) I loved walking up and down the aisles scanning bookshelves until something caught my eye. And that's the problem with formal searches — you only get what you ask for.

The real glory of the Web, and indeed any valuable information source, is that you often don't know what you want, or are interested in, until you stumble across it. The vastness of the Web virtually guarantees that you can meander from page to page for the rest of your natural life without running into the same page twice. But it also makes it correspondingly difficult to run into information that's side by side on the bookshelves, so to speak.

So in my book, perhaps the best bit of search wisdom to take to heart is to know when to use a carefully tailored search, and when to simply let the web lead you wherever it flows. You just might find something you really need, but didn't realize it until it appeared on your screen.

Rich Santalesa is the Executive Editor of NetGuide Magazine and former founding editor of Windows User.

How to differentiate your BBS from 73,000 competitors:

Association of Online Professionals This online system is managed by a member of the Association of Online Professionals and voluntarily subscribes to the AOP Code of Professional Standards.

Association of Online Professionals http://www.wdn.com/aop info@aop.org

(703) 924-9692 (703) 264-1750 BBS Telnet aop.org

Dear Delilah,

I'm a 67 year old lady with a new Pentium computer and I love to explore the online world. Where can I go to meet likeminded seniors?

—Annie in Washington

Dear Annie,

There is plenty for seniors on the major online services, like CompuServe and America Online, as well as various BBSs spread across the world. On AOL go to keyword "SeniorNet" and explore a whole bulletin board of topics, services, games and chat rooms. Or, if you enjoy the World-Wide Web, check out SeniorCom at http://www.senior.com/. Here you can visit the town square complete with newsstand, shopping, and travel resources. Have fun! There are lots of seniors online.

Dear D.

I want to make my own Web page. Where can I learn how to do this? —FLAJackson

Dear Jackson,

There is a wonderful Web site just for you!

http://www.mcli.dist.maricopa,edu/tut/ will give you all you need to know to write HTML programming. You can learn how to make images and even link to other pages. And from this page you can link to other sites for more advanced information.

Dear D,

As the manager of a busy Real Estate office I must decide to what degree my salespeople should have access to the Internet. Are there real benefits?

—Sandra R.

Dear Sandra,

If you are worried that your sales force will waste time "playing," you should know that there will no doubt be some of that. But there will be many benefits to developing an informative company home page or BBS, and your staff will be able to find numerous resources that will be relevant to their work. I suggest you give them some training and guidance at the beginning.

Dear D,

As a concerned parent, what software should I consider purchasing that will restrict access to objectionable material on the Net?

—Tom in AK

Dear Tom,

There is a growing market of "safe surf" software that keeps the power in the hands of the user instead of depending on government regulation. The very best way to know what your children are doing is to use the Internet with them. But since this isn't always possible, check out Net Nanny at

http://www.netnanny.com/netnanny or CyberPatrol which imposes time restrictions at http://www.microsys.com/cyber. And there's SurfWatch at http://www.surfwatch.com.

Dear D

Where can I find a matchmaking service on the Net? —Sara K.

These abound. You can find them in your specific area, or geared to a specific interest or age group. Check out the Virtual MeetMarket at http://wwa.com:1111/ or the Internet Social

Registry at http://www.vpm.com/isr/. Good luck!

Dear D.

How hard is it to find love online?

--- Iustaskin'

Dear Just.

Depends on how "lovable" you are...:-) A meaningful relationship takes a lot of work, whether online or in the real world. But using your computer you can do some screening before you actually meet someone. And your selection is much broader — even global! Give it a try, but go cautiously.

Dear D

My online love refuses to meet me. I am an attractive woman (I am told) and we have shared pictures of ourselves, but I can't understand his reluctance to take our relationship to the real world. Any ideas?

—Confused in Bama

Dear Confused.

Hummmm...usually men are anxious to meet their online sweeties. Perhaps he has not told you the complete truth about himself. I would be very cautious about this one.

Dear D.

I'm 16 and would like to know a good Net site for jokes. — Bobby in Austin

Dear Bobby,

The Funny Bone

(http://www.indirect.com/www/nunley/bone) is an online joke book you might enjoy.

Dear D,

Can you recommend some books about love relationships online? —SusiQ

Dear Susi,

I would recommend my new book, *Ask*Delilah...About Cyberlove but that would be tacky...There are a number of new books on this interesting subject. Check out *net.sex* by Nancy Tamosaitis and *Love Bytes* by David Fox.

Dear D.

I am a high school student and my English teacher has given us the assignment of writing about our state of Oklahoma. Where can I find some information on the Internet? — Terry Dear Terry.

You can research anything online, ya know...and this site is a fine example of what can be done with a community Web site http://www.keytech.com/okc/okchome.shtm. You might also want to check out a state-run Web site for OK at http://www.oklaosf.state.ok.us/. Let me know if you get an "A."

Dear D,

I'm in love with a wonderful man I met on a BBS. But he is married. What should I do??

—LovingSadly

Dear Loving,

I think you are gonna have to walk away from this one. Married men usually stay that way.

Deanna Warren is author of Ask Delilah...About Cyberlove. She calls herself an anachronism in cyberspace — "a middle-aged lady who enjoys communicating with people all over the world on her computer." Contact her at delilah100@aol.com.

To check out the A-list on the Web, go to http://www.channel1.com/usbbs/home

If you're a sysop and would like to be considered for the list, contact one of the following sites. Posting to the USBBS List at these sites will place you on the A-List.

Rusty

Edie

Call a different kind of BBS. "We are the Friendliest BBS in the World." Our name says it all. Edie and I are a couple of burnouts from the 60s. We didn't like rules then and we don't now. Come on in and relax; you will be among friends. We have a huge adult section, including over three gigs of adult graphics, as well as a fine selection of public domain and shareware programs, including over a gig of family-type graphics. But that's not what sets us apart. When you call the first time, you'll know what no amount of words can tell you, you are Home. That's right, put up your feet and enjoy yourself.

We live by three no's: "No Censorship, No Rules, No Hassle."

You'll find us like no other BBS:

- We answer your messages and comments.
- We answer your on-line pages.
- We post our address.
- We post our voice phone number.

The classified ads are for **Pre-Owned items & Software**, and for **BBS ads** only. Ads for new equipment must be inserted in the regular display advertising sections. No logos, or photos, or any other illustrations can be used in the classified ad section.

INSTRUCTIONS are provided to keep the ad rate low and to ensure accuracy. Use the form on the next page to type or print your ad. Ads received that are difficult to read will be returned. Write the desired category at the top of each ad. If a category is not specified, the ad will be placed in the Misc. section. If more than one ad is submitted, use a separate piece of paper for each ad. Ensure that your complete name and address is at the bottom of each ad sheet.

CLASSIFIED RATES \$25 per issue or \$250 per year. Ads can contain up to 300 characters. The name of the BBS is set in boldface capitals. All other type is plain only.

Fill out the form on the next page and **FAX** your ad to 609-953-7961 or **MAIL** it to BBS AD, Callers Digest, Inc., 701 Stokes Rd., Medford, NJ 08055 with check, money order, or credit card information.

Classified ads are purchased 60-90 days in advance. BBS Magazine is not responsible for incorrect telephone numbers/addresses, nor is it responsible for any claims made by classified advertisers.

Interne Minitel,

or the past dozen years or so, the people of France have accessed everything from movie tickets to history lessons via a desktop electronic device that offers secure transactions and the utmost in privacy.

So who needs the Internet?

That seems to be the big question in France, where the proprietary Minitel system rules supreme. Minitel is the brainchild of France Telecom, the

state-owned (and operated) telecommunications company. The idea was simple: Give away the Minitel boxes (essentially dumb terminals) and make money the old-fashioned way - through long distance charges.

Today, more than 16 million people in France use Minitel, compared to around 20,000 Internet users (not including military personnel and students). And why not? After all, it's free, and the services offered are convenient.

According to one survey, the top tasks accomplished via Minitel, in order, are: banking services, mailorder services (e.g., shopping), transportation information (e.g., checking a bus schedule), weather services, and entertainment information. Plus, Minitel has a built-in billing and payment system that means never having to place your credit card number on the network. Users can even order and

pay for pay-per-view events on the system.

Minitel's easy access to these and other basic services make Internet fans seem almost foolish. Why waste time on those silly old Doom pages when you could be making dinner reservations, ordering flowers, and taking care of real life?

Minitel also benefits from its heritage as a home-grown service that is uniquely French. The original Minitel terminals debuted back in the prehistoric year of 1981, when a gopher was still a small furry animal, webs were swept away with a broom and BBSs were just being born. From the beginning, the system has offered services that anyone would want, if they knew they existed. Naturally, it built a major following that is now reluctant to abandon the service in favor of the Internet. As a result, France is falling behind many other European nations (including Great Britain and Germany) that are hopping on the Infobahn.

This may be a case of sticking with the family station wagon while the neighbors buy Peugeots, however. The original Minitel system, which has a major installed base, features a clunky black-and-white interface and top speeds of 1200 baud. Granted, a new, updated Minitel box with speeds of up to 9600 bps is now available. But wouldn't you still rather have a V8?

Image is not the only thing preventing France from jumping on the Internet bandwagon, however. Price also is a considerable factor. An Internet connection requires a personal computer, which averages around US\$3,000 in

France. This is a significant investment, no matter where you live — especially when many French residents still have the original Minitel dumb terminal, which was provided to them for free. (Advanced models have been made available, but are not as prevalent as the original terminals.)

By now you may be wondering what, exactly, has enraptured an entire nation in much the same way the Internet has enslaved the better part of my generation. Well, wonder no more! If you have a Macintosh or Windows machine, Internet access (specifically, Telnet), and plastic, you too can join the wonderful world of

Minitel. The client software can be downloaded for free at: http://www.minitel.com/. The latest service rates will be provided to you when you are ready to go online.

arrive — this is one service that does not give you a free trial not something that encourages casual visits, especially if you already pay long distance charges for your Internet service. However, if you are planning a trip to France (or live in striking distance of the nation), it might be worth visiting.

Personally, I'm sticking with BBSs and the Internet.

Keep in mind that the clock starts ticking as soon as you period. Also, the charges accrue on a minute-by-minute basis

Jaqui Kramer can be reached by email at reeltime@voicenet.com.

BORED?

Sure, all BBS systems are a blast - for the first five minutes. But if you get rooked into one of those knockoff bulletin boards, make sure it comes with a good, strong espresso maker. You're headed for the land of Z's.

BOARD!

Choose Excalibur BBS, the original bulletin board system for Windows, and you can give up caffeine for good. You'll get all the stimulation you can handle

from the
accelerated
bi-directional
protocol that
lets you
upload,
download,
chat, play
games, pat

your head and rub your tummy all at the same time.

Need another boost? Get to know Guinevere – our new, on-line database that's based on HTML, the same spec

as the World Wide
Web. Or hop on
your surfboard —
Excalibur now
has full Internet
connectivity. And
3rd party developers
can get their jolts

from our
Application
Programming
Interface
(API). It lets
you create
everything
from Internet
gateways and

databases to shopping malls, interactive games and more.

You can listen to the experts: Windows Magazine named Excalibur BBS to its 1995 Win 100, and BBS Magazine said our graphics "make the likes of America Online pale." Or you can listen to other users: more of them operate Excalibur than any other

graphical bulletin board system.

All of them will tell you the only way to really stay wired is to modem

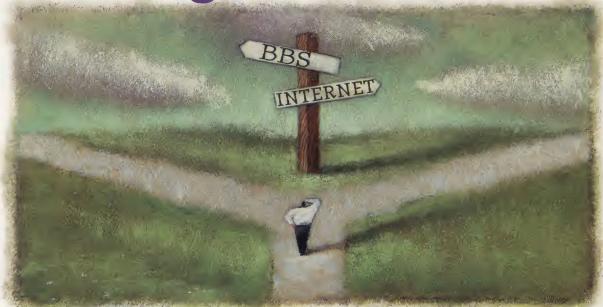

in to Excalibur at

- · Fido Mailer & Tosser
- · Internal OWK Mail
- Credit Accounting
- Programming Language
- dBASE III File Access
- Automated File Maintenance
- Multiple Language Support
- Optimized for DOS, WIN, OS/2
- Intelligent Multiport Support
- OS/2 Comm Driver Support
- PAD (X.25) Support
- Local & LAN Logins
- PCBMail for Windows
- FREE D/L Upgrades for a Year
- FREE Voice Technical Support for a Full Year and BBS Technical Support for life!

"Nothing But Net"

Internet Collection - Now you can offer your callers access to the Internet right from your BBS and still use PCBoard's accounting system to keep track of time limits and access charges. Your callers can use the SLIP and PPP options to browse the World Wide Web with Netscape or Mosaic or use any of the text-mode applications as though they are a part of the BBS itself. Text-mode applications include Telnet, Rlogin, FTP, Gopher, Archie, Finger, Ping, Whois and NTime.

PCBoard Internet Suite - Available 1st Quarter 1996 - Full inbound Internet access to your PCBoard BBS! Anyone on the Internet can logon to your BBS with Telnet or RLogon and access your BBS file directories with FTP. We even include SMTP and NNTP servers so your BBS will receive email and news in real-time and an IRC Chat client so your callers can interact with other users, world-wide, though the Internet.

Project Genesis - Available 2nd Quarter 1996 - Introducing the next generation of online software. Callers will be able to access your BBS through our free multi-tasking client software, standard world-wide-web browsers, or any ASCII/ANSI terminal program. This revolutionary multi-platform software will ship with native versions for Windows 3.1, Windows '95, Windows NT and OS/2.
